Unauthorized reproduction of this manual or the software and/or firmware in the printer may result in imprisonment of up to one year and fines of up to \$10,000 (17 U.S.C.506). Copyright violators may be subject to civil liability.

This product may contain ZPL[®], ZPL II[®], and ZebraLink[™] programs; Element Energy Equalizer[®] Circuit; E^{3®}; and Monotype Imaging fonts. Software © ZIH Corp. All rights reserved worldwide.

ZebraLink and all product names and numbers are trademarks, and Zebra, the Zebra logo, ZPL, ZPL II, Element Energy Equalizer Circuit, and E³Circuit are registered trademarks of ZIH Corp. All rights reserved worldwide.

All other brand names, product names, or trademarks belong to their respective holders. For additional trademark information, please see "Trademarks" on the product CD.

Proprietary Statement This manual contains proprietary information of Zebra Technologies Corporation and its subsidiaries. It is intended solely for the information and use of parties operating and maintaining the equipment described herein. Such proprietary information may not be used, reproduced, or disclosed to any other parties for any other purpose without the express, written permission of Zebra Technologies.

Product Improvements Continuous improvement of products is a policy of Zebra Technologies. All specifications and designs are subject to change without notice.

Liability Disclaimer Zebra Technologies takes steps to ensure that its published Engineering specifications and manuals are correct; however, errors do occur. Zebra Technologies reserves the right to correct any such errors and disclaims liability resulting therefrom.

Limitation of Liability In no event shall Zebra Technologies or anyone else involved in the creation, production, or delivery of the accompanying product (including hardware and software) be liable for any damages whatsoever (including, without limitation, consequential damages including loss of business profits, business interruption, or loss of business information) arising out of the use of, the results of use of, or inability to use such product, even if Zebra Technologies has been advised of the possibility of such damages. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

Declaration of Conformity

We have determined that the Zebra printers identified as the

105SLPlusTM

manufactured by:

Zebra Technologies Corporation 333 Corporate Woods Parkway Vernon Hills, Illinois 60061-3109 U.S.A.

Have been shown to comply with the applicable technical standards of the FCC

For Home, Office, Commercial, and Industrial use

If no unauthorized change is made in the equipment, and if the equipment is properly maintained and operated.

Compliance Information

FCC Compliance Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1. This device may not cause harmful interference, and
- **2.** This device must accept any interference received, including interference that may cause undesired operation.

Note • This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Canadian DOC Compliance Statement

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Who Should Use This Document

This User Guide is intended for use by any person who needs to perform routine maintenance, upgrade, or troubleshoot problems with the printer.

How This Document Is Organized

The User Guide is set up as follows:

Section	Description
Introduction on page 13	This section provides a high-level overview of the printer and its components.
Printer Setup and Operation on page 37	This section assists the technician with initial setup and operation of the printer.
Printer Configuration and Adjustment on page 81	This section assists you with configuration of and adjustments to the printer.
Routine Maintenance on page 123	This section provides routine cleaning and maintenance procedures.
Troubleshooting on page 135	This section provides information about errors that you might need to troubleshoot. Assorted diagnostic tests are included.
Specifications on page 159	This section provides the features of and specifications for this printer.
Glossary on page 167	The glossary provides a list of common terms.

Document Conventions

Table 1 shows the way that certain information is conveyed in this document.

Table 1 • Document Conventions

Alternate Color

If you are viewing this guide online, you can click the <u>blue text</u> used for cross-references or hyperlinks to jump directly to other sections in the guide or to web sites on the internet.

LCD Display Examples

Text from a printer's Liquid Crystal Display (LCD) appears in Arial font.

Command Line Examples, File Names, and Directories

Command line examples, file names, and directories appear in Courier New font. For example:

Type ZTools to get to the Post-Install scripts in the /bin directory.

Open the Zebra<version number>.tar file in the /root directory.

Icons and Advisory Words

The following icons and advisory words are used to draw your attention to certain areas of text.

Caution • Warns you of the potential for electrostatic discharge.

Caution • Warns you of a potential electric shock situation.

Caution • Warns you of a situation where excessive heat could cause a burn.

Caution • Advises you that failure to take or avoid a specific action could result in physical harm to you.

Caution • Advises you that failure to take or avoid a specific action could result in physical harm to the hardware.

$\left(\left(\left$!	
	_		_

Important • Advises you of information that is essential to complete a task.

Note • Indicates neutral or positive information that emphasizes or supplements important points of the main text.

Example • Provides an example, often a scenario, to better clarify a section of text.

Notes •

Introduction

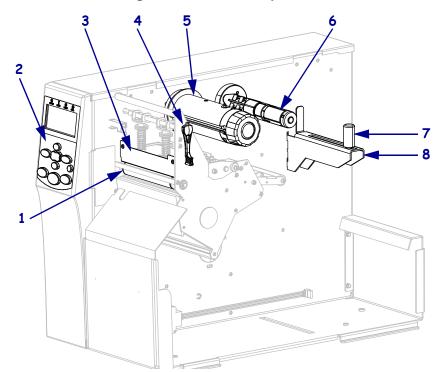

This section provides a high-level overview of the printer and its components.

Contents

rinter Components	. 14
ontrol Panel	. 15
ontrol Panel Display	. 17
ypes of Media	. 47
ibbon Overview	. 49
When to Use Ribbon	. 49
Coated Side of Ribbon	. 49

Printer Components

Figure 1 shows the components inside the media compartment of your printer. Depending on printer model and the installed options, your printer may look slightly different. Familiarize yourself with these components before continuing with the printer setup procedure.

1	Platen roller
2	Control panel
3	Printhead assembly
4	Printhead-open lever
5	Ribbon take-up spindle
6	Ribbon supply spindle
7	Media supply guide
8	Media supply hanger

Control Panel

All controls and indicators for the printer are located on the control panel (Figure 2).

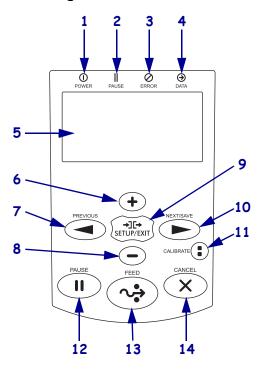

Figure 2 • Control Panel

	1			
1	O POWER light	On when the printer is on.		
2	PAUSE light	On when the printer is	s paused.	
3	Ø ERROR light	Off	Normal operation-no printer errors.	
		On	A printer error exists. Check the display for more information.	
4	4 Off Normal operation. No data being rec processed.		Normal operation. No data being received or processed.	
		On	The printer is processing data or is printing. No data is being received.	
		Blinking	The printer is receiving data from or sending status information to the host computer.	
5	The display shows the printer's operating status and allows the user to navigate the menu system.			
6	The PLUS (+) button changes the parameter values. Common uses are to increase a value, to scroll through choices, or to change values while entering the printer password.			
7	The PREVIOUS button navigates to the previous parameter in the menus.			
8	The MINUS (-) button changes the parameter values. Common uses are to decrease a value, to scroll through choices, or to change the cursor position while entering the printer password.			
9	The SETUP/EXIT b	utton enters and exits of	configuration mode.	

10	 The NEXT/SAVE button When in Setup Mode, the NEXT/SAVE button navigates to the next parameter in the menus.
	• When exiting Setup Mode, the NEXT/SAVE button initiates various options. (See <i>Exit Setup Mode</i> on page 19.)
11	The CALIBRATE button
	 When the printer is paused and in non-continuous mode, the CALIBRATE button initiates a SHORT CAL calibration, which sets the media and web thresholds without adjusting sensor gain, determines the label length, and feeds the media to the next web. If the printer is in continuous mode or is not paused, this button has no effect.
12	The PAUSE button starts or stops printer operation when pressed.
13	The FEED button forces the printer to feed one blank label each time the button is pressed.
14	The CANCEL button cancels print jobs when the printer is paused.

Control Panel Display

The control panel includes a display, where you can view the printer's status or change its operating parameters. In this section, you will learn how to navigate through the menu system and change values for menu items.

After the printer completes the power-up sequence, it moves to the Idle Display (Figure 3).

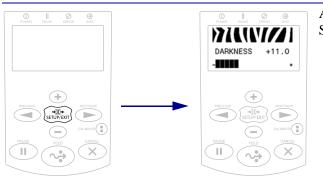

Navigating in the Display

Table 2 shows the options available for navigating through the parameters in the display.

Table 2 • Navigation

Enter Setup Mode

At the Idle Display (Figure 3), press **SETUP** to enter Setup Mode. The printer displays the first parameter.

Scroll through the Parameters

To scroll through the parameters, press **PREVIOUS** or **NEXT/SAVE**.

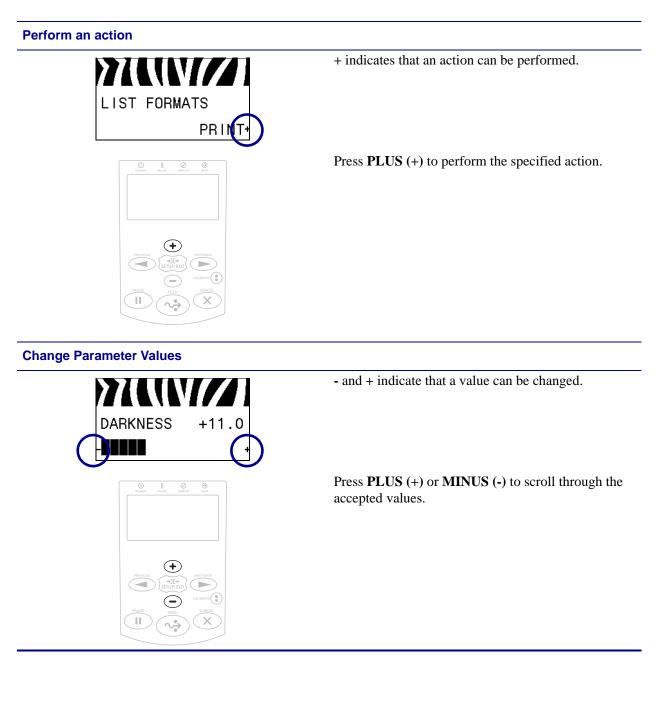

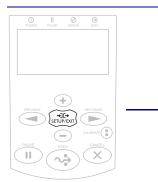

Table 2 • Navigation (Continued)

Exit Setup Mode

SAVE CHANGES -PERMANENT •

- **1.** At the Idle Display (Figure 3), press **SETUP** to enter Setup Mode. The printer displays the first parameter.
- 2. While in Setup Mode, press SETUP/EXIT to exit the operating parameters. The LCD displays SAVE CHANGES.
- **3.** To return to the parameters, plus **PREVIOUS**. OR

Press **PLUS** (+) or **MINUS** (-) to scroll through the exit options:

- PERMANENT—Stores values in the printer even when power is turned off.
- TEMPORARY—Saves the changes until power is turned off.
- CANCEL—This option cancels all changes made since you entered Setup mode, except for changes made to DARKNESS, TEAR OFF, COMMUNICATION, and LANGUAGE settings, which go into effect as soon as they are made.
- LOAD DEFAULTS—Use this option to restore all settings other than the network settings back to the factory defaults. Use care when loading defaults because you will need to reload all settings that you changed manually.
- LOAD LAST SAVE—Loads the values from the last permanent save.
- DEFAULT NET—Use this option to restore all print server and network settings back to the factory defaults. Use care when loading defaults because you will need to reload all settings that you changed manually.
- **4.** Press **NEXT/SAVE** to select the displayed choice and exit Setup Mode.

When the configuration and calibration sequence finishes, the printer returns to the Idle Display.

Changing Password-Protected Parameters

Certain parameters, including the communication parameters, are password-protected by factory default.

Caution • Do not change password-protected parameters unless you have a complete understanding of the parameters' functions. If the parameters are set incorrectly, the printer may function unpredictably.

The first time that you attempt to change a password-protected parameter, the printer displays **ENTER PASSWORD**. Before you can change the parameter, you must enter the four-digit numeric password. After you have entered the password correctly, you do not have to enter it again unless you leave Setup mode by pressing **SETUP/EXIT** or by turning off (**O**) the printer.

To enter a password for a password-protected parameter, complete these steps:

- 1. At the password prompt, use MINUS (-) to change the selected digit position.
- 2. When you have selected the digit that you wish to change, use PLUS (+) to increase the selected digit value. Repeat these two steps for each digit of the password.
- 3. After entering the password, press SELECT.

The parameter you selected to change is displayed. If the password was entered correctly, you can change the value.

Default Password Value

The default password value is **1234**. The password can be changed using the Zebra Programming Language (ZPL) command ^{KP} (Define Password) or using the printer's web pages (ZebraNet wired or wireless print server required).

Disable the Password Protection Feature

You can disable the password protection feature so that it no longer prompts you for a password by setting the password to **0000** via the ^{KP}ZPL command. To re-enable the password-protection feature, send the ZPL command ^{KPx}, where x can be any number from 1 to 9999.

Operating Parameters on the Control Panel

Items in this menu are shown in the order in which they appear when you press the **RIGHT** ARROW. For more information about these settings, see *Print Settings* on page 83.

Set the darkness to the lowest setting that provides good print quality. If you set the darkness too high, the label image may print unclearly, bar codes may not scan correctly, the ribbon may burn through, or the printhead may wear prematurely.

See Print Darkness on page 83 for more information.

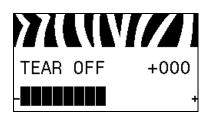

Select the Print Speed

Select the speed for printing a label (given in inches per second). Slower print speeds typically yield better print quality.

See Print Speed on page 83 for more information.

Adjust the Tear-Off Position

If necessary, adjust the position of the media over the tear-off bar after printing.

See Tear-Off Position on page 84 for more information.

Select the Print Mode

Select a print mode that is compatible with your printer options. See *Print Mode* on page 84 for more information.

Set the Media Type Select the type of media that you are using.

See Media Type on page 85 for more information.

Select the Media Sensor

Select the media sensor that is appropriate for the media that you are using.

See Sensor Type on page 102 for more information.

Select the Print Method

Specify if ribbon is being used. Thermal Transfer media requires ribbon for printing while Direct Thermal media does not.

To determine if you need to use ribbon, see *When to Use Ribbon* on page 49.

See Print Method on page 85 for more information.

Adjust the Print Width

Specify the width of the labels being used.

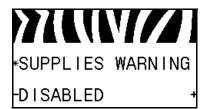

See Print Width on page 85 for more information.

Set the Maximum Label Length

Set the maximum label length to a value that is at least 1.0 in. (25.4 mm) greater than the actual label length plus the interlabel gap. If you set the value to one that is smaller than the label length, the printer assumes that continuous media is loaded, and the printer cannot calibrate.

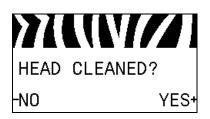

See *Maximum Label Length* on page 86 for more information.

Introduction 23 Control Panel Display

Set Supplies Low Warning

When this feature is enabled, the printer provides warnings when the media or ribbon is reaching near the end of the roll.

See Supplies Low Warning on page 89 for more information.

Set Early Warning for Maintenance

When this feature is enabled, the printer provides warnings when the printhead needs to be cleaned.

See *Early Warning for Maintenance* on page 89 for more information.

Set Printhead Cleaning Interval*

When Early Warning for Maintenance is enabled, set this value to the length of the media or ribbon roll that you are using.

See Printhead Cleaning Interval on page 89 for more information.

* This parameter appears only if Early Warning for Maintenance is enabled.

Reset Printhead Cleaning Counter for Early Warning*

- If you received the message WARNING CLEAN PRINTHEAD, clean the printhead, and then press **PLUS** to select YES to reset the Early Warning for Maintenance printhead cleaning counter.
- If you have not cleaned the printhead, press **MINUS** to select NO.
- * This parameter appears only if Early Warning for Maintenance is enabled.

Set Printhead Life Expectancy*

When Early Warning for Maintenance is enabled, set this value to the number of inches of media that the printhead is expected to print.

See Printhead Life Expectancy on page 89 for more information.

* This parameter appears only if Early Warning for Maintenance is enabled.

- If you received the message WARNING REPLACE HEAD, replace the printhead, and then press **PLUS** (+) to select YES to reset the Early Warning for Maintenance printhead replacement counter.
- If you have not replaced the printhead, press **MINUS** (-) to select NO.
- * This parameter appears only if Early Warning for Maintenance is enabled.

View the Non-Resettable Counter

This parameter displays the total length of media that the printer has printed.

See Non-Resettable Counter on page 90 for more information.

View User-Controlled Counter 1

This parameter displays the total length of media that the printer has printed since this counter was last reset.

See User-Controlled Counters on page 90 for more information.

View User-Controlled Counter 2

This parameter displays the total length of media that the printer has printed since this counter was last reset.

See User-Controlled Counters on page 90 for more information.

Print Counter Readings

Prints a label that lists the odometer readings for the following:

- the non-resettable counter
- the two user-controlled counters
- the Early Warning for Maintenance counters, which indicate when the printhead was last cleaned and the printhead life (If the Early Warning for Maintenance feature is disabled, the counters related to it do not print.)

See Print Counter Readings on page 90 for more information.

Introduction 25 Control Panel Display

LIST IMAGES PRINT+

Print Font List

This option prints a label that lists the available fonts in the printer, including standard printer fonts plus any optional fonts. Fonts may be stored in RAM or Flash memory.

See Print Information on page 91 for more information.

Print Bar Code List

This option prints a label that lists the available bar codes in the printer. Bar codes may be stored in RAM or Flash memory.

See Print Information on page 91 for more information.

Print Image List

This option prints a label that lists the available images stored in the printer's RAM, Flash memory, or optional memory card.

See Print Information on page 91 for more information.

Print Format List

This option prints a label that lists the available formats stored in the printer's RAM, Flash memory, or optional memory card.

See Print Information on page 91 for more information.

Print Configuration Label

This option prints a configuration label (see Figure 13 on page 149), which lists the current printer configuration.

See Print Information on page 91 for more information.

Print Network Configuration Label

This option prints a configuration label (see Figure 14 on page 149), which lists the settings for any print server that is installed.

See Print Information on page 91 for more information.

Print All Labels

This option prints labels that list the available fonts, bar codes, images, formats, and the current printer and network configurations.

See Print Information on page 91 for more information.

Initialize Flash Memory

This option erases all previously stored information from Flash memory.

1. If prompted for a password, enter the printer password. For instructions, see *Changing Password-Protected Parameters* on page 20.

The display shows INITIALIZE FLASH?

2. Press PLUS (+) to select YES.

The display shows ARE YOU SURE?.

- **3.** Do you want to continue?
- Press **MINUS** (-) to select NO to cancel the request and return to the INITIALIZE FLASH prompt.
- Press **PLUS** (+) to select YES and begin initialization. When initialization is complete, the control panel displays INITIALIZING COMPLETED.

Note • Initializing memory can take several minutes.

See Initialize Flash Memory on page 91 for more information.

Print a Sensor Profile

Use this menu item to print a sensor profile.

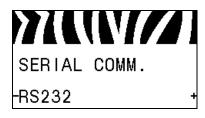

See Print a Sensor Profile on page 91 for more information.

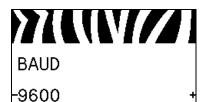

Introduction 27 Control Panel Display

Calibrate the Media and Ribbon Sensors

Use this menu item to adjust the sensitivity of the media and ribbon sensors.

See *Media and Ribbon Sensor Calibration* on page 94 for more information. For instructions on how to perform a calibration procedure, see *Calibrate the Ribbon and Media Sensors Manually* on page 106.

Set Parallel Communications

Select the communications port that matches the one being used by the host computer.

See Parallel Communications on page 103 for more information.

Set Serial Communications

Select the communications port that matches the one being used by the host computer.

See Parallel Communications on page 103 for more information.

Set the Baud Rate

Select the baud value that matches the one being used by the host computer.

See Baud Rate on page 104 for more information.

Set the Data Bits Value

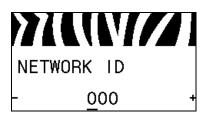

Select the data bits value that matches the one being used by the host computer.

See Data Bits on page 104 for more information.

Set the Parity Value

Select the parity value that matches the one being used by the host computer.

See Parity on page 104 for more information.

Set the Host Handshake Protocol Value

Select the handshake protocol that matches the one being used by the host computer.

See Host Handshake on page 105 for more information.

Set the Zebra Protocol Value

Protocol is a type of error checking system. Depending on the selection, an indicator may be sent from the printer to the host computer signifying that data has been received. Select the protocol that is requested by the host computer.

See Protocol on page 105 for more information.

Set the Network ID

This parameter assigns a unique number to the printer when the printer is operating in an RS422/485 multi-drop network environment (an external RS422/485 adapter is required). This gives the host computer the means to address a specific printer. This does not affect TCP/IP or IPX networks. Set a unique network ID number for this printer.

See Network ID on page 105 for more information.

Enable Communication Diagnostics Mode

Use this diagnostics tool to cause the printer to output the hexadecimal values for all data received by the printer.

See *Communication Diagnostics Mode* on page 94 for more information.

Introduction 29 Control Panel Display

DELIMITER CHAR -2C , _____

Set the Control Character Value

Set the control prefix character to match what is used in your label formats.

See Control Character on page 100 for more information.

Set the Format Command Prefix Value

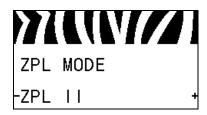

Set the format command prefix character to match what is used in your label formats.

See Command Character on page 101 for more information.

Set the Delimiter Character Value

Set the delimiter character to match what is used in your label formats.

See Delimiter Character on page 101 for more information.

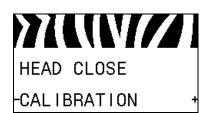

Set the ZPL Mode

Select the ZPL mode that matches what is used in your label formats.

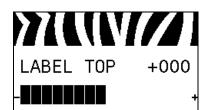

See ZPL Mode on page 101 for more information.

Set the Power-Up Action

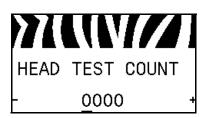

Set the action for the printer to take during the power-up sequence. See Power-Up Action on page 92 for more information.

Set the Head-Close Action

Set the action for the printer to take when you close the printhead. See *Head-Close Action* on page 92 for more information.

Set the Backfeed Sequence

This parameter sets when label backfeed occurs after a label is removed in some print modes. It has no effect in Rewind mode. This setting is superseded by ~JS when received as part of a label format.

See *Backfeed Sequence* on page 87 for more information.

Adjust the Label Top Position

This parameter adjusts the print position vertically on the label. Positive numbers adjust the label top position farther down the label (away from the printhead) by the specified number of dots. Negative numbers adjust the position up the label (toward the printhead).

See Label Top Position on page 87 for more information.

Adjust the Label Left Position

If necessary, shift the print position horizontally on the label. Positive numbers move the left edge of the image toward the center of the label by the number of dots selected, while negative numbers move the left edge of the image toward the left edge of the label.

See Label Left Position on page 87 for more information.

Set the Head Test Count*

The printer periodically performs a test of the printhead functionality. This parameter establishes how many labels are printed between these internal tests.

See *Head Test Count* on page 87 for more information.

Introduction 31 Control Panel Display

Set the Reprint Mode

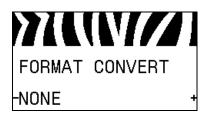

When reprint mode is enabled, you can reprint the last label printed either by issuing certain commands or by pressing the **LEFT ARROW** on the control panel.

See Reprint Mode on page 88 for more information.

View Sensor Settings

The following parameters are automatically set during the calibration procedure and should be changed only by a qualified service technician.

Select Format Conversion Scaling Factor

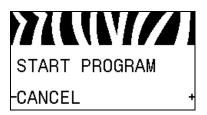

Selects the bitmap scaling factor. The first number is the original dots per inch (dpi) value; the second, the dpi to which you would like to scale.

See Format Conversion on page 94 for more information.

Select the Idle Display

Select the information shown on the printer's display when the printer is idle.

See Idle Display on page 95 for more information.

Set the Real-Time Clock (RTC) Date

This parameter allows you to set the date to display in the Idle Display.

See RTC Date on page 95 for more information.

Set the Real-Time Clock (RTC) Time This parameter allows you to set the date to display

This parameter allows you to set the date to display in the Idle Display.

See RTC Time on page 95 for more information.

Run the Specified ZBI Program*

- To run the ZBI program selected by the previous menu item, press **PLUS** (+).
- If you did not replace the ribbon, press **MINUS** (-) to select CANCEL, or press the **LEFT ARROW** or **RIGHT ARROW** to move to another parameter.

See *Run a ZBI Program* on page 95 for more information.

* This menu item appears only if ZBI is enabled on your printer and no ZBI program is running.

Select the Primary Network Device

This parameter determines which device should be considered primary in the active device selection.

See Primary Network on page 96 for more information.

Introduction 33 Control Panel Display

View if IP Settings Are Loaded from the Printer or Print Server

This parameter tells whether to use the printer's or the print server's LAN/WLAN settings at power-up. The default is to use the printer's settings.

See Load from External Device on page 96 for more information.

View the Active Print Server*

This menu item displays which print server is being used. This tells which device's settings such as IP protocol and IP address are being displayed under those menu items.

* This menu item, which cannot be modified from the control panel, appears only if a wired or wireless print server is installed in your printer.

Set the IP Resolution Method*

This parameter tells if the user (permanent) or the server (dynamic) selects the IP address. If a dynamic option is chosen, this parameter tells the method(s) by which the wired or wireless print server receives the IP address from the server.

See IP Protocol on page 97 for more information.

* This menu item appears only if a wired or wireless print server is installed in your printer.

Set the Printer's IP Address*

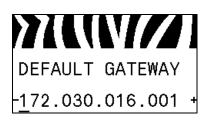

View and, if necessary, change the printer's IP address.

Changes are saved only if IP PROTOCOL is set to PERMANENT. To allow any saved changes to take effect, use *RESET NETWORK* on page 35 to reset the print server.

See IP Address on page 97 for more information.

* This menu item appears only if a wired or wireless print server is installed in your printer.

Set the Subnet Mask*

View and, if necessary, change the subnet mask.

Changes are saved only if IP PROTOCOL is set to PERMANENT. To allow any saved changes to take effect, use *RESET NETWORK* on page 35 to reset the print server.

See Subnet Mask on page 98 for more information.

* This menu item appears only if a wired or wireless print server is installed in your printer.

Set the Default Gateway*

View and, if necessary, change the default gateway.

Changes are saved only if IP PROTOCOL is set to PERMANENT. To allow any saved changes to take effect, use *RESET NETWORK* on page 35 to reset the print server.

See Default Gateway on page 98 for more information.

* This menu item appears only if a wired or wireless print server is installed in your printer.

View the MAC Address*

View the Media Access Control (MAC) address of the print server that is installed in the printer (wired or wireless).

See MAC Address on page 98 for more information.

* This menu item, which cannot be modified from the control panel, appears only if a wired or wireless print server is installed in your printer.

View the ESSID Value*

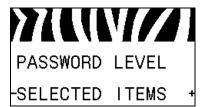

The Extended Service Set Identification (ESSID) is an identifier for your wireless network. This setting, which cannot be modified from the control panel, gives the ESSID for the current wireless configuration.

See ESSID on page 99 for more information.

* This menu item, which cannot be modified from the control panel, appears only if a wireless print server is installed in your printer.

Introduction 35 Control Panel Display

Reset the Network Settings*

This option resets the wired or wireless print server. You must reset the print server to allow any changes to the network settings to take effect.

See Reset Network on page 99 for more information.

* This menu item appears only if a wired or wireless print server is installed in your printer.

Specify the Password Level

This parameter allows you to select whether certain factoryselected menu items or all menu items are password protected.

See Password Level on page 95 for more information.

Select the Display Language

If necessary, change the language that the printer displays.

See Language on page 100 for more information.

Note • The selections for this parameter are displayed in the actual languages to make it easier for you to find one that you are able to read.

Handling the Printer

This section describes how to handle your printer.

Unpack and Inspect the Printer

Important • Zebra Technologies is not responsible for any damage incurred during the shipment of the equipment and will not repair this damage under warranty.

When you receive the printer, do the following:

- **1.** Immediately unpack the printer.
- **2.** Check all exterior surfaces for damage.
- 3. Raise the media door, and inspect the media compartment for damage to components.

4. If you discover shipping damage during inspection, do the following:

- Immediately notify the shipping company, and file a damage report.
- Keep all packaging material for shipping company inspection.
- Notify your authorized Zebra reseller.

To Store the Printer

If you are not placing the printer into immediate operation, repackage it using the original packing materials. You may store the printer under the following conditions:

- Temperature: -40° F to 140° F (-40° to 60° C)
- Relative humidity: 5% to 85% non-condensing

To Ship the Printer

Save all packing materials in case you need to ship the printer in the future.

To ship the printer, do the following:

- **1.** Turn off (**O**) the printer, and disconnect all cables.
- 2. Remove any media, ribbon, or loose objects from the printer interior.
- 3. Close the printhead.
- **4.** Carefully pack the printer into the original container or a suitable alternate container to avoid damage during transit. A shipping container can be purchased from Zebra if the original packaging has been lost or destroyed.

Select a Location for the Printer

Select a location for the printer that meets these conditions:

- **Surface:** The surface where the printer will be located must be solid, level, and of sufficient size and strength to hold the printer.
- **Space:** The area where the printer will be located must include enough space for ventilation and for accessing the printer components and connectors. To allow for proper ventilation and cooling, leave open space on all sides of the printer.

Caution • Do not place any padding or cushioning material behind or under the printer because this restricts air flow and could cause the printer to overheat.

- **Power:** The printer should be within a short distance of an appropriate power outlet that is easily accessible.
- **Data communication interfaces:** The printer must be within range of your WLAN radio (if applicable) or within an acceptable range for other connectors to reach your data source (usually a computer). For more information on maximum cable lengths and configuration, see Table 4 on page 41.
- **Operating conditions:** Your printer is designed to function in a wide range of environmental and electrical conditions, including a warehouse or factory floor. Table 3 shows the temperature and relative humidity requirements for the printer when it is operating.

Mode	Temperature	Relative Humidity
Thermal Transfer	41° to 104°F (5° to 40°C)	20 to 85% non-condensing
Direct Thermal	32° to 104°F (0° to 40°C)	

Table 3 • Operating Temperature and Humidity

Select a Data Communication Interface

You may connect your printer to a computer using one or more of the available connections. The standard connections are shown in Figure 4. A ZebraNet wired or wireless print server option or a parallel port may also be present on your printer.

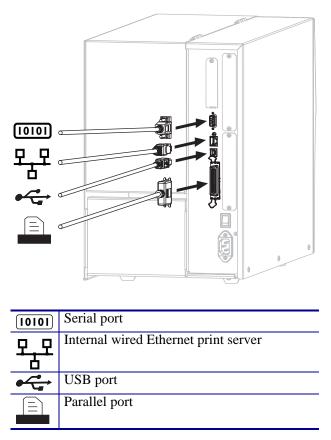

Table 4 on page 41 provides basic information about data communication interfaces that you can use to connect your printer to a computer. You may send label formats to the printer through any data communication interface that is available. Select an interface that is supported by both your printer and your computer or your Local Area Network (LAN).

Caution • Ensure that the printer power is off (**O**) before connecting data communications cables. Connecting a data communications cable while the power is on (**I**) may damage the printer.

Interface	Standard or Option	Description
RS-232 Serial	Standard	 Limitations and Requirements Maximum cable length of 50 ft (15.24 m). You may need to change printer parameters to match the host computer. You need to use a null-modem adaptor to connect to the printer if using a standard modem cable. Connections and Configuration The baud rate, number of data and stop bits, the parity, and the XON/XOFF or DTR control
USB	Standard	 Limitations and Requirements Maximum cable length of 16.4 ft (5 m). No printer parameter changes required to match the host computer.
		Connections and Configuration No additional configuration is necessary.
8-bit Parallel data Star interface	Standard	 Limitations and Requirements Maximum cable length of 10 ft (3 m). Recommended cable length of 6 ft (1.83 m). No printer parameter changes required to match the host computer. A wired or wireless print server (if installed) takes up this port on the printer.
		Connections and Configuration No additional configuration is necessary.
Wired Ethernet print server	Option	 Limitations and Requirements Can print to the printer from any computer on your LAN. Can communicate with the printer through the printer's web pages. The printer must be configured to use your LAN. A parallel connection or a wireless print server (if installed) takes up this port on the printer.
		Caution • Be careful not to plug a USB cable into a wired Ethernet print server connector on the printer because doing so will damage the Ethernet connector.
		Connections and Configuration Refer to the <i>ZebraNet</i> <i>Wired and Wireless Print Servers User Guide</i> for configuration instructions. A copy of this manual is available at http://www.zebra.com/manuals or on the user CD that came with your printer.
		Note • To use this connection, you may need to remove a factory-installed plug that is designed to keep someone from accidentally plugging a USB connector into this port.

Table 4 • Data Co	mmunication Interfaces
-------------------	------------------------

Interface	Standard or Option	Description
Wireless print server	Option	 Limitations and Requirements Can print to the printer from any computer on your Wireless Local Area Network (WLAN). Can communicate with the printer through the printer's web pages. The printer must be configured to use your WLAN. A parallel connection or a wired print server (if installed) takes up this port on the printer.
		Configuration Refer to the <i>ZebraNet Wired and Wireless Print</i> <i>Servers User Guide</i> for configuration instructions. A copy of this manual is available at http://www.zebra.com/manuals or on the user CD that came with your printer.

Table 4 • Data Communication	Interfaces (Continued)
------------------------------	------------------------

Data Cables

You must supply all data cables for your application.

Ethernet cables do not require shielding, but all other data cables must be fully shielded and fitted with metal or metallized connector shells. Unshielded data cables may increase radiated emissions above the regulated limits.

To minimize electrical noise pickup in the cable:

- Keep data cables as short as possible.
- Do not bundle the data cables tightly with the power cords.
- Do not tie the data cables to power wire conduits.

Connect the Printer to a Power Source

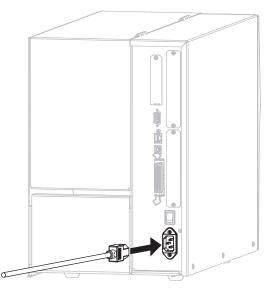

The AC power cord must have a three-prong female connector on one end that plugs into the mating AC power connector at the rear of the printer. If a power cable was not included with your printer, refer to *Power Cord Specifications* on page 44.

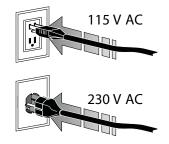

Caution • For personnel and equipment safety, always use an approved three-conductor power cord specific to the region or country intended for installation. This cord must use an IEC 320 female connector and the appropriate region-specific three-conductor grounded plug configuration.

To connect the printer to a power source, complete these steps:

1. Plug the female end of the A/C power cord into the A/C power connector on the back of the printer.

2. Plug the male end of the A/C power cord into an appropriate power outlet.

3. Turn on (**I**) the printer.

The printer boots up and performs a self-test.

Power Cord Specifications

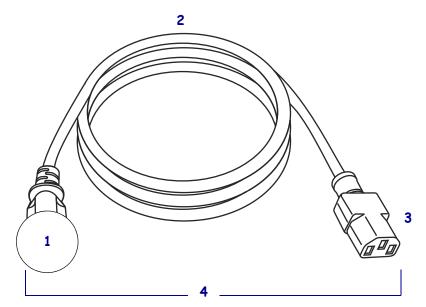

Caution • For personnel and equipment safety, always use an approved three-conductor power cord specific to the region or country intended for installation. This cord must use an IEC 320 female connector and the appropriate region-specific, three-conductor grounded plug configuration.

Depending on how your printer was ordered, a power cord may or may not be included. If one is not included or if the one included is not suitable for your requirements, see Figure 5 and refer to the following guidelines:

- The overall cord length must be less than 9.8 ft. (3 m).
- The cord must be rated for a minimum of 10 A, 250 V.
- The chassis ground (earth) **must** be connected to ensure safety and reduce electromagnetic interference.

1	AC power plug for your country—This should bear the certification mark of at least one of the known international safety organizations
	mark of at least one of the known international safety organizations
	(Figure 6).
2	3-conductor HAR cable or other cable approved for your country.
3	IEC 320 connector—This should bear the certification mark of at least one of the known international safety organizations (Figure 6).
	least one of the known international safety organizations (Figure 6).
4	Length \leq 9.8 ft. (3 m). Rating 10 Amp minimum, 250 VAC.

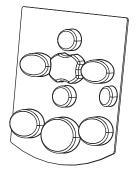

Figure 6 • International Safety Organization Certification Symbols

Install the Control Panel Keypad Cover

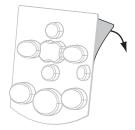

A protective cover for the control panel keypad is provided with your printer (Figure 7). Install this optional cover if your printer will operate in a moist or dirty environment. This will help to protect the keypad from damage.

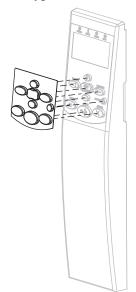

To install the control panel keypad cover, complete these steps:

1. Remove the paper backing from the control panel keypad cover to expose the adhesive.

2. Carefully align the cover over the keypad. Press to make the cover adhere to the printer.

Types of Media

Important • Zebra strongly recommends the use of Zebra-brand supplies for continuous high-quality printing. A wide range of paper, polypropylene, polyester, and vinyl stock has been specifically engineered to enhance the printing capabilities of the printer and to prevent premature printhead wear. To purchase supplies, go to http://www.zebra.com/howtobuy.

Your printer can use various types of media:

- *Standard media*—Most standard media uses an adhesive backing that sticks individual labels or a continuous length of labels to a liner. Standard media can come on rolls or in a fanfold stack (Table 5).
- *Tag stock*—Tags are usually made from a heavy paper. Tag stock does not have adhesive or a liner, and it is typically perforated between tags. Tag stock can come on rolls or in a fanfold stack (Table 5).

Media Type	How It Looks	Description
Non-Continuous Roll Media		 Roll media is wound on a 3-in. (76-mm) core. Individual labels or tags are separated by one or more of the following methods: Web media separates labels by gaps, holes, or notches. Image: Image: Imag

Table 5 • Roll and Fanfold Media

Media Type	How It Looks	Description
Non-Continuous Fanfold Media		Fanfold media is folded in a zigzag pattern. Fanfold media can have the same label separations as non-continuous roll media. The separations would fall on or near the folds.
Continuous Roll Media		Roll media is wound on a 3-in. (76-mm) core. Continuous roll media does not have gaps, holes, notches, or black marks to indicate label separations. This allows the image to be printed anywhere on the label. Sometimes a cutter is used to cut apart individual labels.

Table 5 • Roll and Fanfold Media (Continued)

Ribbon Overview

Ribbon is a thin film that is coated on one side with wax, resin, or wax resin, which is transferred to the media during the thermal transfer process. The media determines whether you need to use ribbon and how wide the ribbon must be.

When ribbon is used, it must be as wide as or wider than the media being used. If the ribbon is narrower than the media, areas of the printhead are unprotected and subject to premature wear.

When to Use Ribbon

Thermal Transfer media requires ribbon for printing while Direct Thermal media does not. To determine if ribbon must be used with a particular media, perform a media scratch test.

To perform a media scratch test, complete these steps:

- 1. Scratch the print surface of the media rapidly with your fingernail.
- 2. Did a black mark appear on the media?

If a black mark	Then the media is
Does not appear on the media	Thermal transfer. A ribbon is required.
Appears on the media	Direct thermal. No ribbon is required.

Coated Side of Ribbon

Ribbon can be wound with the coated side on the inside or outside (Figure 8). This printer can only use ribbon that is coated on the outside. If you are unsure which side of a particular roll of ribbon is coated, perform an adhesive test or a ribbon scratch test to determine which side is coated.

Figure 8 • Ribbon Coated on Outside or Inside

Adhesive Test

If you have labels available, perform the adhesive test to determine which side of a ribbon is coated. This method works well for ribbon that is already installed.

To perform an adhesive test, complete these steps:

- **1.** Peel a label from its liner.
- 2. Press a corner of the sticky side of the label to the outer surface of the roll of ribbon.
- **3.** Peel the label off of the ribbon.
- 4. Observe the results. Did flakes or particles of ink from the ribbon adhere to the label?

If ink from the ribbon	Then	
Adhered to the label	The ribbon is coated on the outside and can be used in this printer.	
Did not adhere to the label	The ribbon is coated on the inside and cannot be used in this printer. To verify this, repeat the test on the other surface of the roll of ribbon.	

Ribbon Scratch Test

Perform the ribbon scratch test when labels are unavailable.

To perform a ribbon scratch test, complete these steps:

- **1.** Unroll a short length of ribbon.
- **2.** Place the unrolled section of ribbon on a piece of paper with the outer surface of the ribbon in contact with the paper.
- 3. Scratch the inner surface of the unrolled ribbon with your fingernail.
- **4.** Lift the ribbon from the paper.
- 5. Observe the results. Did the ribbon leave a mark on the paper?

If the ribbon	Then
Left a mark on the paper	The ribbon is coated on the outside and can be used in this printer.
Did not leave a mark on the paper	The ribbon is coated on the inside and cannot be used in this printer.
	To verify this, repeat the test on the other surface of the roll of ribbon.

Select a Print Mode

Use a print mode that matches the media being used and the printer options available (Table 6).

Print Mode	When to Use/Printer Options Required	Printer Actions
Tear-Off (default setting)	Use for most applications. This mode can be used with any printer options and most media types.	The printer prints label formats as it receives them. The printer operator can tear off the printed labels any time after they print.
		roll media in Tear-Off mode
	fanfold media in Tear-Off mode (rear feed)	
		fanfold media in Tear-Off mode (bottom feed)

Table 6 • Print Modes and Printer Options

Print Mode	When to Use/Printer Options Required	Printer Actions
Peel-Off	Use when the printer has the Rewind option if you want to remove the labels from the liner one label at a time.	The printer peels the label from the liner during printing and then pauses until the label is removed. The liner winds onto the rewind spindle.
	Red solid lines = media, Blue dotted lines = backing only	
Rewind	Use when the printer has the Rewind option if you want to save the labels without separating them or removing them from their backing.	The printer prints without pausing between labels. The media is wound onto the rewind spindle after printing.

Table 6 • Print Modes and Printer Options

Print Mode	When to Use/Printer Options Required	Printer Actions
Cutter	Use when the printer has a cutter option if you want the labels to be cut apart.	The printer prints a label and then cuts it free.

Table 6 • Print Modes and Printer Options

Load the Ribbon

Use the instructions in this section to load ribbon (if used) in your printer. Ribbon is used only with thermal transfer labels. For direct thermal labels, do not load ribbon in the printer. To determine if ribbon must be used with a particular media, see *When to Use Ribbon* on page 49.

Caution • While performing any tasks near an open printhead, remove all rings, watches, hanging necklaces, identification badges, or other metallic objects that could touch the printhead. You are not required to turn off the printer power when working near an open printhead, but Zebra recommends it as a precaution. If you turn off the power, you will lose all temporary settings, such as label formats, and you must reload them before you resume printing.

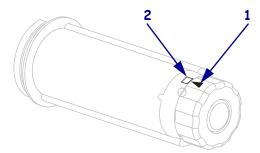

Important • Use ribbon that is wider than the media to protect the printhead from wear. Ribbon must be coated on the outside. See *Coated Side of Ribbon* on page 49 for more information.

To load ribbon, complete these steps:

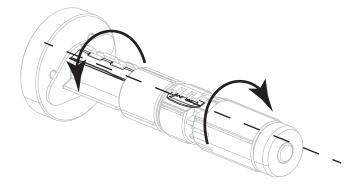

1. Raise the media door.

2. Align the arrow (1) on the ribbon take-up spindle knob with the notch (2) in the ribbon take-up spindle.

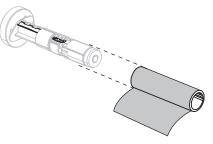

3. Align the segments of the ribbon supply spindle.

4. Position the ribbon with the loose end unrolling clockwise.

5. Place the roll of ribbon on the ribbon supply spindle. Push the roll back as far as it will go.

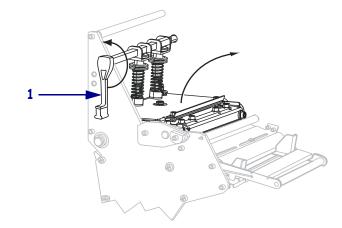

6. A ribbon leader makes ribbon loading and unloading easier. Does your roll of ribbon have paper or something else attached to the end to serve as a ribbon leader?

lf	Then	
Yes	Continue with the next step.	
No	a. Tear off a strip of media (labels and liner) about 6–12 in. (150–305 mm) long from the roll.	
	b. Peel a label from the media strip.	
	c. Use this label (1) to attach the end of the ribbon (2) to the media strip (3) The media strip acts as a leader.	

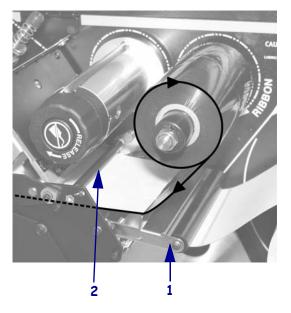

7. Caution • The printhead may be hot and could cause severe burns. Allow the printhead to cool.

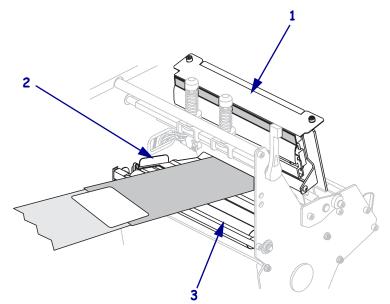

Rotate the printhead-open lever (1) to the open position.

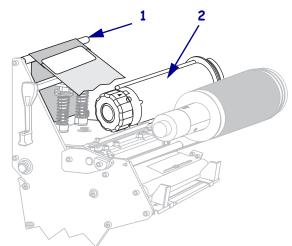

8. Thread the ribbon over the media dancer assembly (1) and under the ribbon guide roller (2).

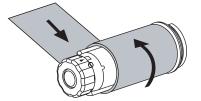

9. Push the ribbon leader forward until it passes under the printhead assembly (1), over the snap plate (2), and then over the platen roller (3).

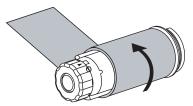

10. Bring the ribbon leader over the upper ribbon roller (**1**) and then toward the ribbon take-up spindle (**2**).

11. Wind the ribbon leader and attached ribbon counterclockwise around the ribbon take-up spindle.

12. Rotate the spindle counterclockwise several turns to wind the ribbon and remove any slack.

13. Is media already loaded?

lf	Then	
No	a. Continue with <i>Load the Media</i> on page 59.	
Yes	 a. Push down the printhead assembly (1), and then rotate the printhead-open lever (2) until it locks into place. 	
	b. Close the media door.	

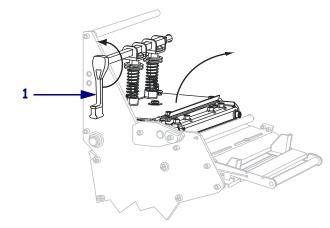

Load the Media

1.

 $\ensuremath{\textbf{Caution}}$ \bullet The printhead may be hot and could cause severe burns. Allow the printhead to cool.

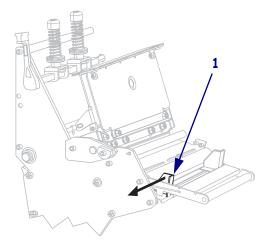

Open the printhead assembly by rotating the printhead-open lever (1).

2. Loosen the thumb screw (not visible from this angle) that is located on the bottom of the outer media guide (1).

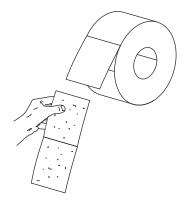

3. Slide the outer media guide (1) all the way out.

4. Insert media into the printer. Follow the instructions for roll or fanfold media, as appropriate.

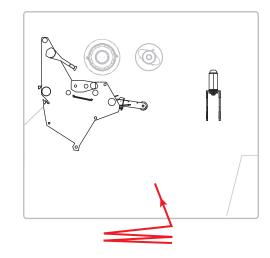

a. Remove and discard any tags or labels that are dirty or that are held by adhesives or tape.

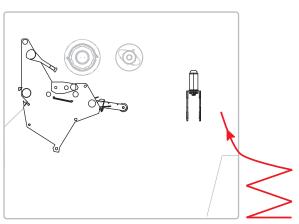

a. Thread the fanfold media through the bottom or rear slot.

Fanfold Media

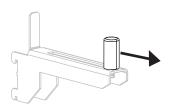

Bottom Feed

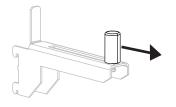

Rear Feed

b. Pull out the media supply guide as far as it goes.

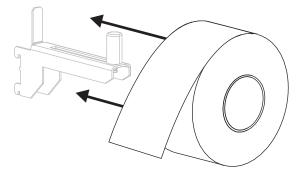

b. Pull out the media supply guide as far as it goes.

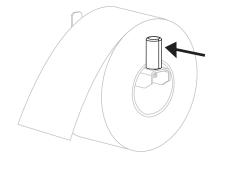

c. Place the roll of media on the media supply hanger. Push the roll back as far as it will go.

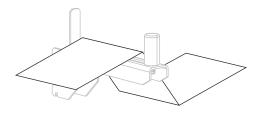

d. Slide in the media supply guide until it touches the edge of the roll.

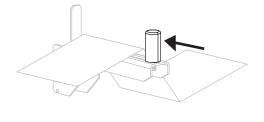

c. Drape the media over the media supply hanger.

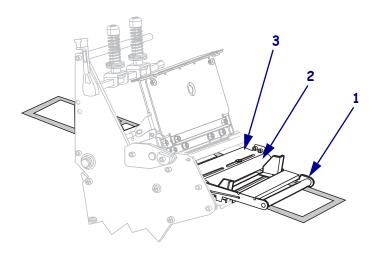

d. Slide in the media supply guide until it touches the edge of the media.

5. Thread the media under the media dancer assembly roller (1), the media guide roller (2), and then the upper media sensor (3).

Important • Make sure that you thread the media under these components. If you thread the media over them, the media obstructs the ribbon sensor and causes a false **RIBBON OUT** error.

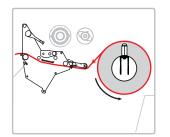

- Push the media forward until it passes under the printhead assembly (1), under the snap plate (2), and then over the platen roller (3).

7. In which print mode will your printer be operating? (For more information on print modes, see *Select a Print Mode* on page 51.)

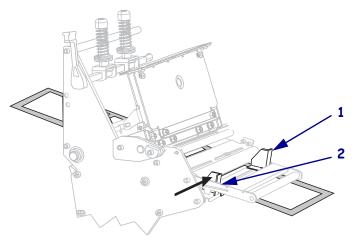

If using	Then
Tear-Off mode	Continue with <i>Final Steps for</i> <i>Tear-Off Mode</i> on page 65.
Peel-Off mode	Continue with <i>Final Steps for Peel-Off Mode</i> on page 67.

If using	Then
Rewind mode	Continue with <i>Final Steps for</i> <i>Rewind Mode</i> on page 72.
Cutter mode	Continue with <i>Final Steps for Cutter</i> <i>Mode</i> on page 77.

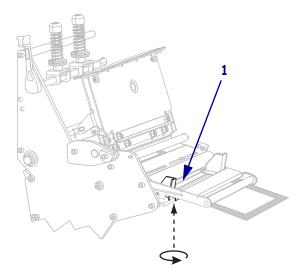

Final Steps for Tear-Off Mode

8. Align the media with the inner media guide (1). Slide in the outer media guide (2) until it just touches the edge of the media.

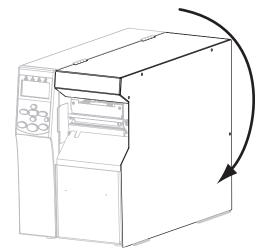

9. Tighten the thumb screw (not visible from this angle) that is located on the bottom of the outer media guide (**1**).

10. Push down the printhead assembly (1), and then rotate the printhead-open lever (2) until it

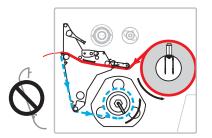

11. Close the media door.

locks into place.

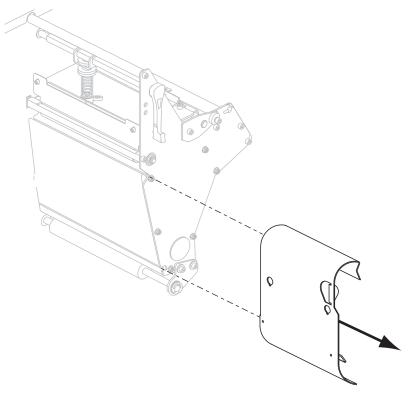

- **12.** Set the printer to Tear-Off mode (for more information, see *Print Mode* on page 84).
- **13.** If desired, perform the *CANCEL Self Test* on page 149 to verify that your printer is able to print.

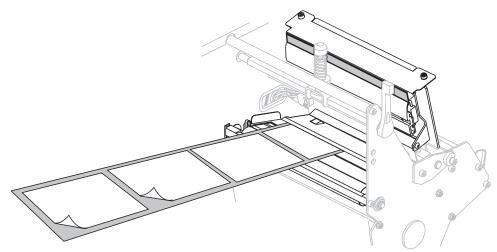

Final Steps for Peel-Off Mode

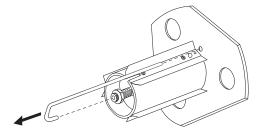

8. Remove the rewind plate (if installed) from the front of the printer. Store it on the two mounting screws on the inside of the printer base.

9. Extend approximately 36 in. (920 mm) of media out of the printer. Remove and discard the labels from this exposed media.

10. Remove the hook from the rewind spindle.

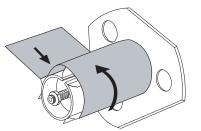

11. If you are using a core, slide it onto the rewind spindle until it is flush against the guide plate.

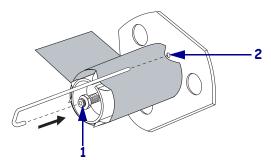

Note • A core is not required.

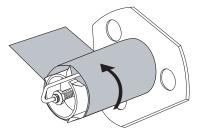

12. Wind the media liner counterclockwise around the rewind spindle.

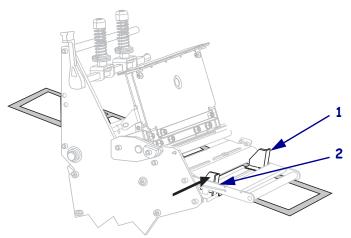

a. Reinstall the hook. Insert the short end of the hook into the hole in the center of the adjusting nut (1). Insert the long end of the hook into the small hole on the guide plate (2).

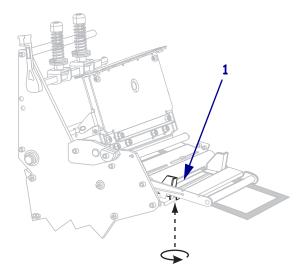

b. Rotate the spindle counterclockwise several turns to wind the media liner over the hook and remove any slack.

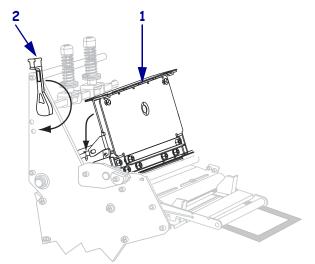

13. Align the media with the inner media guide (**1**). Slide in the outer media guide (**2**) until it just touches the edge of the media.

14. Tighten the thumb screw (not visible from this angle) that is located on the bottom of the outer media guide (**1**).

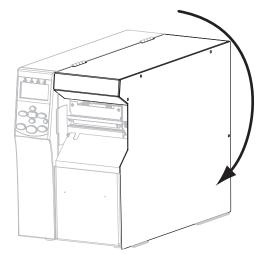

15. Push down the printhead assembly (**1**), and then rotate the printhead-open lever (**2**) until it locks into place.

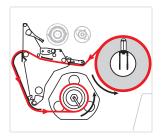

The backing winds on the rewind spindle or core.

16. Close the media door.

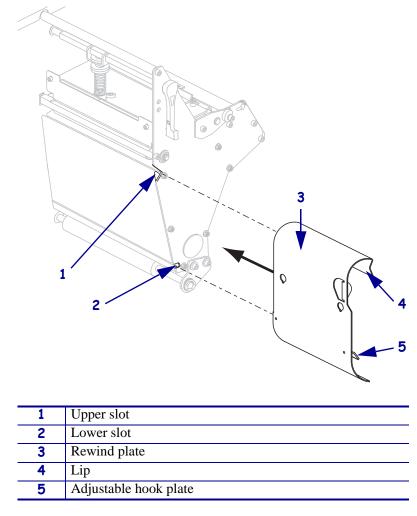

- 17. Set the printer to Peel-Off mode (for more information, see *Print Mode* on page 84).
- **18.** If desired, perform the *CANCEL Self Test* on page 149 to verify that your printer is able to print.

Final Steps for Rewind Mode

- 8. Remove the rewind plate from its storage location inside the printer.
- 9. Position the rewind plate so that the lip on the attached hook plate points down.

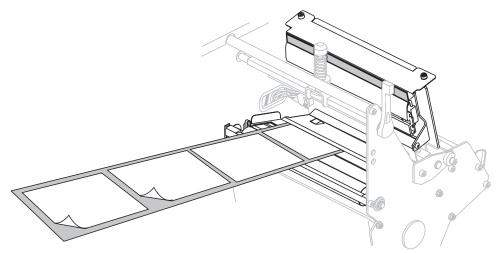

10. Insert the hook plate lip 1/2 in. (13 mm) into the lower slot in the side plate.

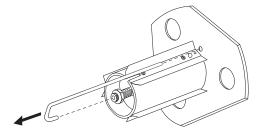

11. Align the upper end of the rewind plate with the matching upper slot in the side plate.

12. Slide in the rewind plate until it stops against the printer's main frame.

13. Extend approximately 36 in. (920 mm) of media out of the printer. Remove and discard the labels from this exposed media.

14. Remove the hook from the rewind spindle.

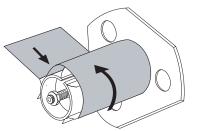

15. If you are using a core, slide it onto the rewind spindle until it is flush against the guide plate.

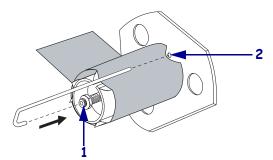

Note • A core is not required.

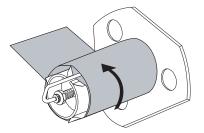

16. Wind the media liner counterclockwise around the rewind spindle.

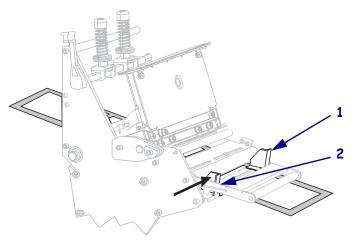

a. Reinstall the hook. Insert the short end of the hook into the hole in the center of the adjusting nut (1). Insert the long end of the hook into the small hole on the guide plate (2).

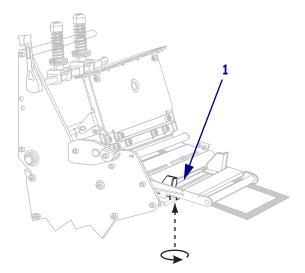

b. Rotate the spindle counterclockwise several turns to wind the media liner over the hook and remove any slack.

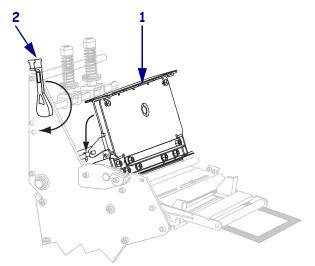

17. Align the media with the inner media guide (1). Slide in the outer media guide (2) until it just touches the edge of the media.

18. Tighten the thumb screw (not visible from this angle) that is located on the bottom of the outer media guide (**1**).

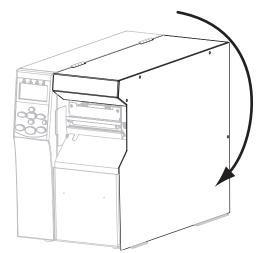

19. Push down the printhead assembly (**1**), and then rotate the printhead-open lever (**2**) until it locks into place.

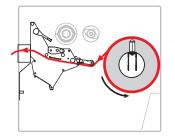

The media winds on the rewind spindle or core.

20. Close the media door.

- **21.** Set the printer to Rewind mode (for more information, see *Print Mode* on page 84).
- **22.** If desired, perform the *CANCEL Self Test* on page 149 to verify that your printer is able to print.

Final Steps for Cutter Mode

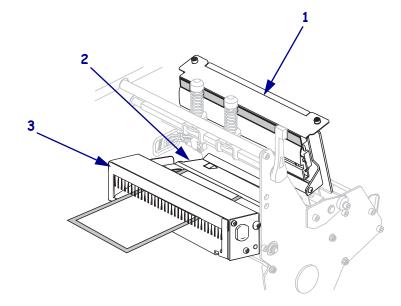

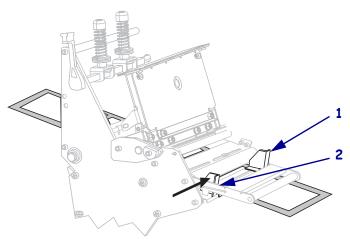

8.

Caution • The cutter blade is sharp. Do not touch or rub the blade with your fingers.

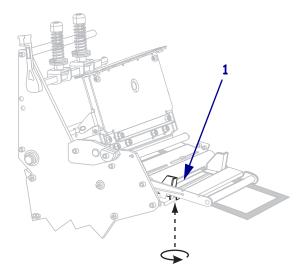

Thread the media forward until it passes under the printhead assembly (1), under the snap plate (2), and through the cutter assembly (3).

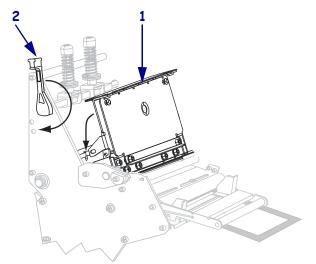

9. Align the media with the inner media guide (**1**). Slide in the outer media guide (**2**) until it just touches the edge of the media.

10. Tighten the thumb screw (not visible from this angle) that is located on the bottom of the outer media guide (**1**).

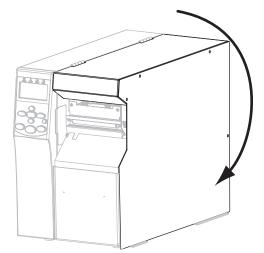

11. Push down the printhead assembly (1), and then rotate the printhead-open lever (2) until it locks into place.

The media winds on the rewind spindle or core.

12. Close the media door.

- **13.** Set the printer to Cutter mode (for more information, see *Print Mode* on page 84).
- **14.** If desired, perform the *CANCEL Self Test* on page 149 to verify that your printer is able to print.

Changing Printer Settings

This section presents the printer settings that you can change and identifies the tools for changing them. These tools include the following:

- ZPL and Set/Get/Do (SGD) commands (See the *Zebra[®] Programming Guide* for more information.)
- The printer's **control panel display** (See *Control Panel Display* on page 17 for more information.)
- The printer's **web pages** when the printer has an active wired or wireless print server connection (See the *ZebraNet Wired and Wireless Print Servers User Guide* for more information.)

Copies of the referenced manuals are available at http://www.zebra.com/manuals or on the user CD that came with your printer.

This section contains the following subsections:

- Print Settings on page 83
- Maintenance and Diagnostic Tools on page 89
- Network Settings on page 96
- Language Settings on page 100
- Port Settings on page 103

Print Settings

Print Darkness	Set the darkness to the lowest setting that provides good print quality. If you set the darkness too high, the label image may print unclearly, bar codes may not scan correctly, the ribbon may burn through, or the printhead may wear prematurely.
	If desired, use the <i>FEED Self Test</i> on page 151 to determine the best darkness setting.
	Accepted values: $0.0 - 30.0$
	Related ZPL command(s): $MD, \sim SD$
	SGD command used: print.tone
	Control panel menu item: DARKNESS on page 21
	Printer web page: View and Modify Printer Settings > General Setup > Darkness
Print Speed	Select the speed for printing a label (given in inches per second). Slower print speeds typically yield better print quality.
	Accepted values: • 203 dpi: 2–12 ips • 300 dpi: 2–9 ips
	Related ZPL command(s): ^PR
	SGD command used: media.speed

Calibrate the Ribbon and Media Sensors Manually

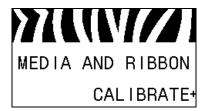

Use the calibration procedure in this section when necessary to calibrate the printer based on the media and ribbon that you are currently using. Manual calibration is recommended whenever you are using pre-printed labels (or label backing) or if the printer will not correctly auto calibrate.

- For issues that may be resolved by sensor calibration, see *Printing Issues* on page 136.
- For a summary of the options for initiating calibration, see *Media and Ribbon Sensor Calibration* on page 94.

Important • Follow the calibration procedure exactly as presented. All of the steps must be performed even if only one of the sensors requires adjustment. You may press and hold CANCEL at any step in this procedure to cancel the process.

To perform sensor calibration, complete these steps:

- **1.** With the printer in the Ready state, initiate media and ribbon calibration through the printer's display:
 - **a.** Navigate to the following parameter. See *Control Panel Display* on page 17 for information about using the control panel.

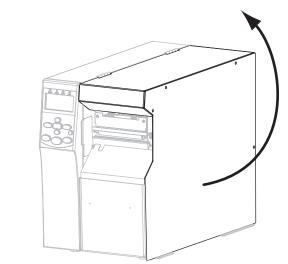

b. Press RIGHT SELECT to select START.

The printer does the following:

- The STATUS light and SUPPLIES light flash yellow once.
- The **PAUSE light** blinks yellow.
- The control panel displays:

LOAD BACKING

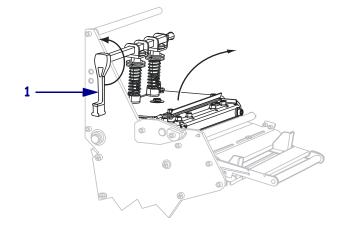

2. Raise the media door.

3. Caution • The printhead may be hot and could cause severe burns. Allow the printhead to cool.

Rotate the printhead-open lever (1) to the open position.

If you are using	Then
Media where labels are	a. Set the sensor type to WEB. (See <i>Sensor Type</i> on page 102.)
separated by gaps	b. Extend approximately 8in. (203 mm) of media out of the printer.
	c. Remove and discard the labels from this exposed media.
	d. Pull the backing into the printer.

4. What type of media are you using? For more information, see *Types of Media* on page 47.

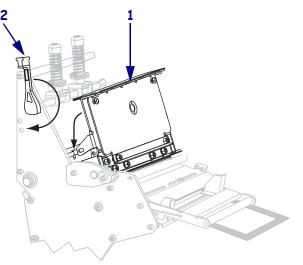

If you are using	Then
Black mark media	a. Set the sensor type to MARK. (See <i>Sensor Type</i> on page 102.)
	b. Position a black mark over the red light from the black mark media
	sensor.
Media where labels are separated by holes or notches	a. Remove the media from between the media sensors.

5. Press **PLUS** (+) to continue.

The control panel displays:

REMOVE RIBBON

- **6.** Remove the ribbon (if used).
- **7.** Push down the printhead assembly (**1**), and then rotate the printhead-open lever (**2**) until it locks into place.

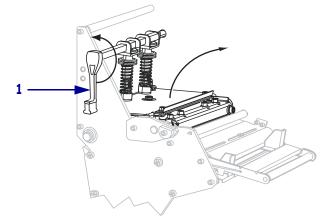

8. Press PAUSE to begin the media calibration process.

The control panel displays:

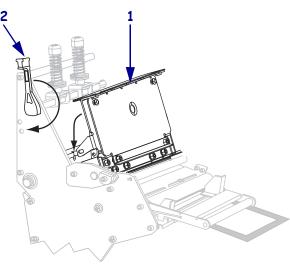

When the process is complete, the control panel displays: $\ensuremath{\text{RELOAD}}\ensuremath{\mbox{RLL}}$

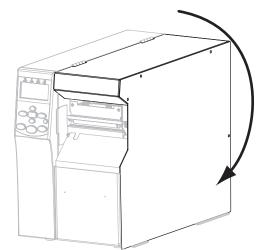

9. Rotate the printhead-open lever (**1**) to the open position.

- **10.** Reload the media and ribbon (if used). With preprinted or black mark media, make sure that an area without preprinting or without a black mark is over the media sensor.
- **11.** Push down the printhead assembly (**1**), and then rotate the printhead-open lever (**2**) until it locks into place.

12. Close the media door.

The printer completes calibration and feeds labels until they come to rest in the appropriate spot for printing.

13. Press **PAUSE** to enable printing.

Remove Used Ribbon

Remove used ribbon from the ribbon take-up spindle each time you change the roll of ribbon.

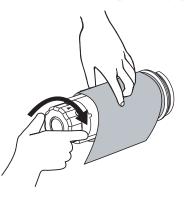

To remove used ribbon, complete these steps:

1. Has the ribbon run out?

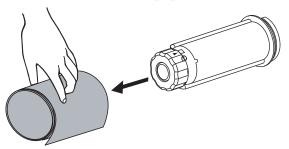

If the ribbon	Then	
Ran out	Continue with the next step.	
Did not run out		

2. While holding the ribbon take-up spindle, turn the ribbon release knob clockwise until it stops.

The ribbon release bars pivot down, easing the spindle's grip on the used ribbon.

3. Slide the used ribbon off of the ribbon take-up spindle and discard.

Remove Media or Liner from the Rewind Spindle

Rewind mode uses the rewind spindle to wind media, while Peel-Off mode uses the rewind spindle to wind used liner. Remove the media or the liner from the rewind spindle each time that you change media.

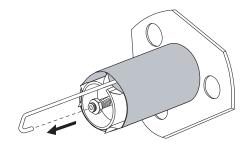

Important • It is **not** necessary to turn off the power to remove media or liner from the rewind spindle. If power is turned off, all label formats and images, as well as any temporarily saved parameter settings stored in the printer's internal memory, are lost. When power is turned back on, these items must be reloaded.

To remove media or liner from the rewind spindle, complete these steps:

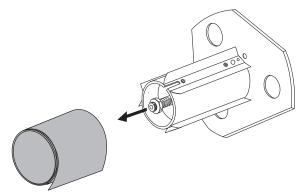

lf	Then		
No	 a. Create slack in the media or liner by rotating the rewind spindle slightly clockwise. 		
	 b. Cut or tear the media or liner at the rewind spindle. 		
Yes	Continue with the next step.		

1. Has the media run out?

2. Pull out the spindle hook.

3. Slide the media or liner off of the rewind spindle.

Adjust Transmissive Media Sensors

The transmissive media sensor assembly consists of two parts: a light source and a light sensor. The lower media sensor is the light source, and the upper media sensor is the light sensor. The media passes between the two parts.

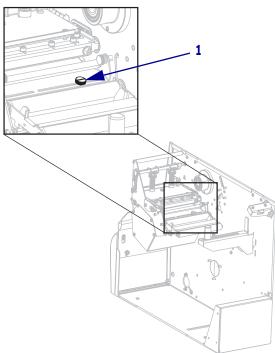

Adjust these sensors only when the printer cannot detect the top of the labels. In this situation, the control panel LCD displays **ERROR CONDITION PAPER OUT**, even though there are labels loaded in the printer. For non-continuous media with a notch or hole in the media, the sensor must be directly above the notch or hole.

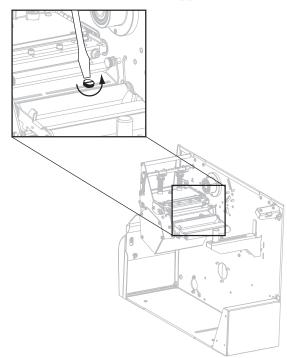

Upper Media Sensor

The upper media sensor can be positioned along the inner portion of the media (the side closest to the back frame of the printer) or the outer portion of the media (the side farthest from the back frame of the printer). Moving the media sensor to the outer portion of the media should be performed only by a qualified service technician.

To reposition the upper media sensor along the inside portion of the media, complete these steps:

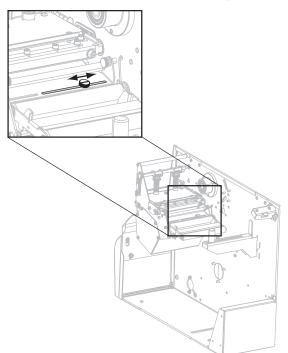

- **1.** Remove the ribbon (if ribbon is used).
- 2. Locate the upper media sensor adjustment screw (1). The upper media sensor eye is directly below the adjustment screw head.

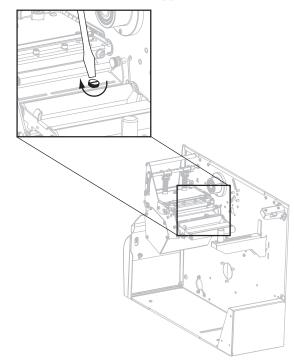

3. Using a thin, flat-blade screwdriver, loosen the upper media sensor adjustment screw.

4. Slide the upper media sensor along the slot to the desired position.

5. Tighten the adjustment screw to secure the upper media sensor in its new position.

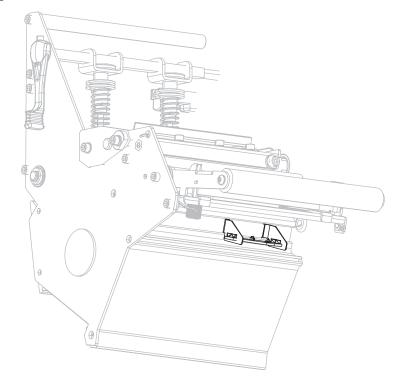

6. Adjust the lower media sensor to match the new position of the upper media sensor. See *Lower Media Sensor* on page 118.

Lower Media Sensor

After you adjust the upper media sensor, adjust the lower media sensor to match its new position.

To adjust the lower media sensor, complete these steps:

1. Locate the lower media sensor assembly under the rear roller. The sensor is a spring clip holding a circuit board.

2. Slide the lower sensor until it is under the upper media sensor. Use the light that shines from the lower sensor to help align it with the upper sensor. Gently pull the wires as needed (wires should have a little slack).

Adjust Printhead Pressure and Toggle Position

Print quality depends on the labels and ribbon used as well as the toggle pressure and position. Make sure that your labels and ribbon are acceptable for your application. If they are, check the toggle position and then the printhead pressure.

Toggle Position Adjustment

You may need to adjust the toggles if printing is too light on one side or if thick labels are used. If the toggle pressure is too light or uneven, the labels and ribbon may slip.

To position the toggles, complete these steps:

- 1. Print some labels at 2 in. (51 mm) per second by running the PAUSE Self Test (see *PAUSE Self Test* on page 150).
- **2.** While printing labels, use the control panel to lower the darkness setting until the labels are printing gray instead of black (see *Print Darkness* on page 83).

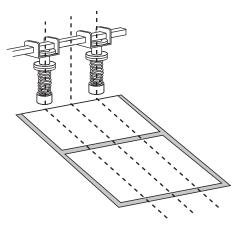

3.

Caution • The printhead may be hot and could cause severe burns. Allow the printhead to cool.

Loosen the locking nut at the top of each toggle assembly.

4. Position the toggles approximately 1/4 of the way in from each edge of the media. (For extremely narrow media, position one toggle over the center of the labels, and decrease the pressure on the unused toggle.)

5. Tighten the locking nuts.

- **6.** Print additional labels at 2 in. (51 mm) per second by again running the PAUSE Self Test. (Press and hold PAUSE while turning on (I) the printer.)
- **7.** Do both sides of the label print at the same level of gray?

lf	Then		
Yes	The toggles are positioned correctly. Increase the darkness setting to the optimum level for the media being used.		
No	a. Readjust the position of the toggle or toggles toward the side that printed lighter.b. Print additional labels at 2 in. (51 mm) per second by again running the		
	PAUSE Self Test. (Press and hold PAUSE while turning on (I) the printer.)c. Repeat this step until both sides of the label print at the same level of gray.d. Increase the darkness setting to the optimum level for the media being used.		

Printhead Pressure Adjustment

If positioning the toggles properly does not solve a print quality problem, try adjusting the printhead pressure. Maximize printhead life by using the lowest pressure that produces the desired print quality.

Caution • Observe proper electrostatic safety precautions when handling any static-sensitive components such as circuit boards and printheads.

To adjust printhead pressure, complete these steps:

Before adjusting the printhead pressure, check that the toggles are positioned correctly. See *Toggle Position Adjustment* on page 119.

Printhead life and drive system life (belts and bearings) can be maximized by using the lowest pressure that produces the desired print quality without allowing the ribbon or media to slip. You may need to adjust the printhead pressure in the following instances:

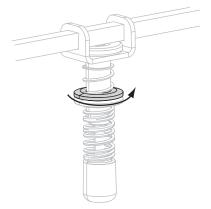

- if there is noticeable bleed or swelling in the printed image (too much pressure)
- if there are voids (too little pressure)
- if the darkness setting (burn duration) is set properly, but printing is too light (too little pressure)
- if the ribbon slips (too little pressure)

Caution • Observe proper electrostatic safety precautions when handling any static-sensitive components such as circuit boards and printheads.

To adjust printhead pressure, complete these steps:

- 1. As needed throughout this procedure, refer to the *PAUSE Self Test* on page 150 to print test labels.
- **2.** Refer to *Print Darkness* on page 83 to set the darkness value (burn duration) appropriately for your media and ribbon.
- 3. Loosen the locking nut on the toggle assemblies.

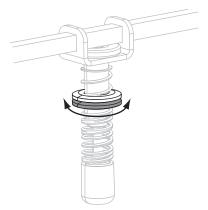

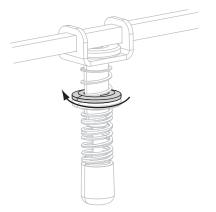

4. Caution • The printhead may be hot and could cause severe burns. Allow the printhead to cool.

Move the adjusting nut until the print quality is acceptable. Use the lowest pressure that provides the desired print quality.

- To increase printhead pressure, move the adjusting nut downward.
- To decrease printhead pressure, move the adjusting nut upward.

5. To lock the toggle pressure, tighten the locking nut against the adjusting nut.

Routine Maintenance

This section provides routine cleaning and maintenance procedures.

Clean the Cutter	64

Replacing Printer Components

Some printer components, such as the printhead and platen roller, may wear out over time and can be replaced easily. Regular cleaning may extend the life of some of these components. See *Cleaning Schedule and Procedures* on page 125 for the recommended cleaning intervals.

Ordering Replacement Parts

For optimal printing quality and proper printer performance across our product line, Zebra strongly recommends the use of genuine ZebraTM supplies as part of the total solution.

Contact your authorized Zebra reseller for part ordering information, or see http://www.zebra.com/support.

Recycling Printer Components

The majority of this printer's components are recyclable. The printer's main logic board includes a battery that you should dispose of properly.

Do not dispose of any printer components in unsorted municipal waste. Please dispose of the battery according to your local regulations, and recycle the other printer components according to your local standards. For more information, see http://www.zebra.com/environment.

Lubrication

Other than lubricating the cutter blade after approximately 60,000 cuts, no lubrication is needed for this printer.

Caution • The cutter blade is sharp. Do not touch or rub the blade with your fingers.

Caution • Some commercially available lubricants will damage the finish and the mechanical parts if used inappropriately on this printer.

Cleaning Schedule and Procedures

Cleaning your printer regularly maintains print quality and may extend the life of the printer. The recommended cleaning schedule is shown in Table 13. See the following pages for specific procedures.

Caution • While performing any tasks near an open printhead, remove all rings, watches, hanging necklaces, identification badges, or other metallic objects that could touch the printhead. You are not required to turn off the printer power when working near an open printhead, but Zebra recommends it as a precaution. If you turn off the power, you will lose all temporary settings, such as label formats, and you must reload them before you resume printing.

Caution • Use only the cleaning agents indicated. Zebra is not responsible for damage caused by any other fluids being used on this printer.

Area	Method	Interval
Printhead	Solvent*	Perform these procedures at the following times:
Platen roller	Solvent*	• When CLEAN HEAD NOW appears.
Transmissive (media) sensor	Air blow [†]	• Direct Thermal Print Mode: After every roll of labels or 500 ft (150 m) of fanfold labels.
Black mark sensor	Air blow [†]	 Thermal Transfer Print Mode: After every roll
Media path	Solvent*	(1500 ft or 450 m) of ribbon.
Ribbon sensor	Air blow	
Label-available sensors	Air blow	Every 6 months, or as needed
Tear-off/peel-off bar	Solvent*	7
Snap plate	Solvent*	As needed
Cutter	Solvent*	7

Table 13 • Recommended Printer Cleaning Schedule

* Zebra recommends using Preventive Maintenance Kit (part number 47362). In place of this kit, you may use a clean swab dipped in a solution of isopropyl alcohol (minimum 90%) and deionized water (maximum 10%).

† If using canned air, it is recommended that you turn off the printer before cleaning.

Clean the Exterior

Clean the outside surfaces of the printer with a lint-free cloth. Use a mild detergent solution or desktop cleaner sparingly, as needed.

Caution • Do not use harsh or abrasive cleaning agents or solvents.

Clean the Media Compartment

After every four rolls of media, inspect the media compartment. Use a soft bristle brush or a vacuum cleaner to remove any dirt and lint from the interior of the printer.

Clean the Printhead and Platen Roller

If print quality does not improve after you perform this procedure, clean the printhead with *Save-a-Printhead* cleaning film. This specially coated material removes contamination buildup without damaging the printhead. Call your authorized Zebra reseller or distributor for more information.

Clean the printhead after every roll (1500 feet or 450 m) of thermal transfer ribbon or after every roll (500 feet or 150 m) of direct thermal labels or when **CLEAN HEAD NOW** appears on the LCD. Clean the printhead more often if you see inconsistent print quality, such as voids in the bar code or graphics.

Caution • The printhead may be hot and can cause severe burns. Allow the printhead to cool.

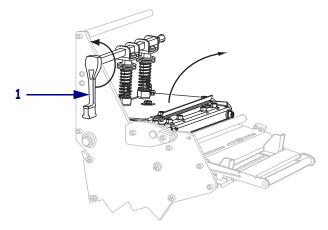

Caution • Before touching the printhead assembly, discharge any built-up static electricity by touching the metal printer frame or by using an anti-static wriststrap and mat.

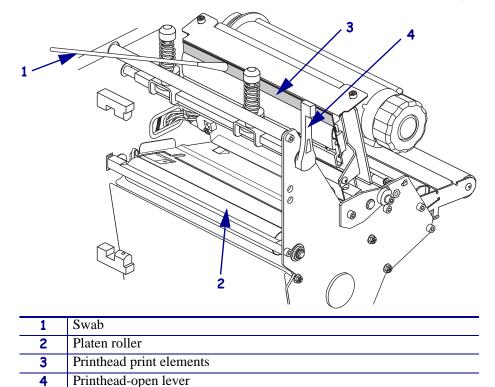

Caution • While performing any tasks near an open printhead, remove all rings, watches, hanging necklaces, identification badges, or other metallic objects that could touch the printhead. You are not required to turn off the printer power when working near an open printhead, but Zebra recommends it as a precaution. If you turn off the power, you will lose all temporary settings, such as label formats, and you must reload them before you resume printing.

To clean the printhead and platen roller, complete these steps:

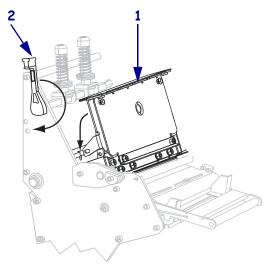

1. Open the printhead assembly by rotating the printhead-open lever (**1**).

- **2.** Remove the media and ribbon (if loaded).
- **3.** Using the swab from the Preventive Maintenance Kit (part number 47362), wipe along the brown strip on the printhead assembly from end to end. In place of the Preventive Maintenance Kit, you may use a clean swab dipped in a solution of isopropyl alcohol (minimum 90%) and deionized water (maximum 10%). Allow the solvent to evaporate.

- **4.** While manually rotating the platen roller, clean it thoroughly with the swab. Allow the solvent to evaporate.
- **5.** Reload the media and the ribbon (if required).
- 6. Push down the printhead assembly (1), and then rotate the printhead-open lever (2) until it locks into place.

Clean the Sensors

Brush or vacuum any accumulated paper lint and dust off the sensors. Clean the sensors according to the recommendations in *Cleaning Schedule and Procedures* on page 125.

Ribbon and Label-Available Sensor Locations

The ribbon sensor and optional label-available sensor are shown in Figure 9.

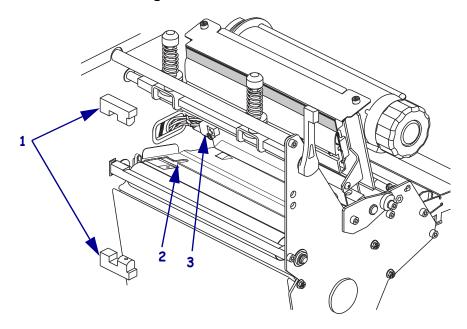

Figure 9 • Sensor Locations

1	Label-available sensors	
2	Black mark sensor	
3	Ribbon sensor	

Transmissive Media Sensor

The upper and lower transmissive media sensors are show in Figure 10 and Figure 11.

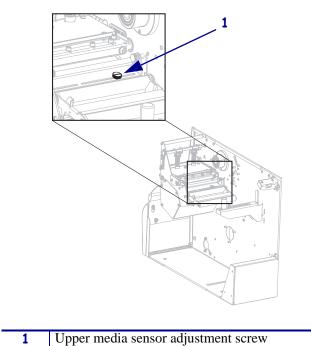

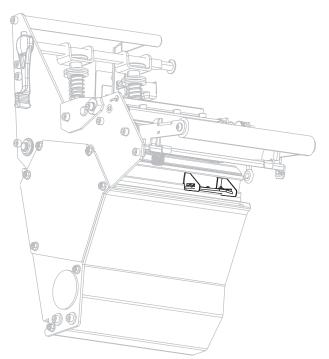

Figure 10 • Upper Media Sensor

Figure 11 • Lower Media Sensor

Clean the Snap Plate

Clean the snap plate when label adhesive or a label is stuck to the underside. Figure 12 shows the location of the snap plate.

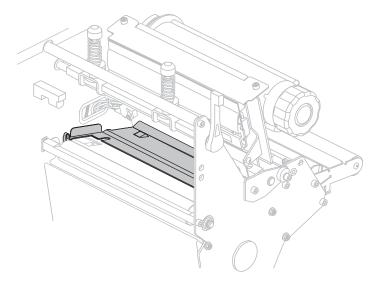

Figure 12 • Snap Plate Location

Important • Be careful not to bend or twist the metal snap plate as you remove it from or insert it into the printer.

To clean the snap plate, complete these steps:

1.

Caution • Turn off (**O**) the printer and disconnect it from the power source before performing the following procedure.

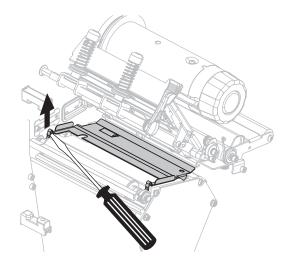

Turn off (**O**) the printer, and disconnect the AC power cord and all data cables.

2. Caution • While performing any tasks near an open printhead, remove all rings, watches, hanging necklaces, identification badges, or other metallic objects that could touch the printhead.

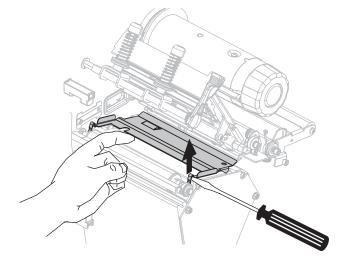

Open the printhead and remove the media and ribbon (if used).

3. Insert a small-blade screwdriver or similar tool into the loop on the left side of the snap plate. Gently lift the left side of the snap plate slightly and, if necessary, support it with your left hand.

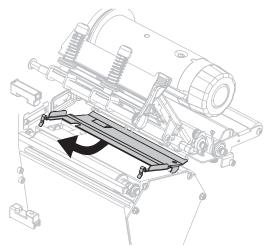

Important • Take care not to bend, twist, or otherwise deform the loops. If the snap plate is damaged in any way, you may need a new plate for proper ribbon sensing.

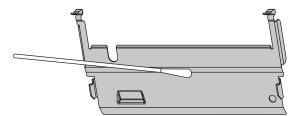

4. Insert the small-blade screwdriver or similar tool into the loop on the right side of the snap plate. Gently lift the right side of the snap plate.

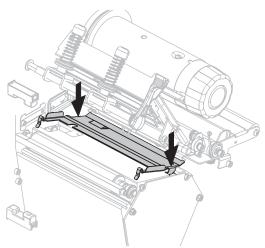

5. Remove the snap plate from the printer.

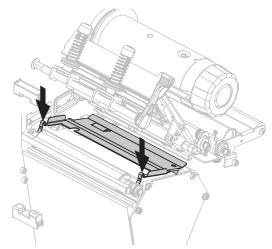

6. Using the swab from the Preventive Maintenance Kit (part number 47362), clean the back of the snap plate. In place of the Preventive Maintenance Kit, you may use a clean swab or soft cloth dipped in a solution of isopropyl alcohol (minimum 90%) and deionized water (maximum 10%). Allow the solvent to evaporate.

7. To reinstall the snap plate, insert the two tabs on the bottom of the snap plate into the two slots of the media path.

8. Press down on the loops to lock the snap plate into place.

- **9.** Reinstall the media and ribbon (if used).
- **10.** Reconnect the data cables and AC power cord, and turn on (I) the printer.

Clean the Cutter

If the cutter is not cutting the labels cleanly or if it jams with labels, clean the cutter.

Caution • The cutter blade is sharp. Do not touch or rub the blade with your fingers.

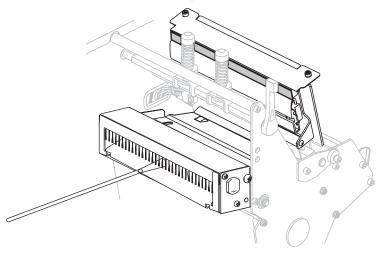

To clean the cutter, complete these steps:

 Caution • Turn off (O) the printer and disconnect it from the power source before performing the following procedure.

Turn off (**O**) the printer, and disconnect the AC power cord and all data cables.

2. Using the swab from the Preventive Maintenance Kit (part number 47362), clean the stationary cutter blade. In place of the Preventive Maintenance Kit, you may use a clean swab dipped in a solution of isopropyl alcohol (minimum 90%) and deionized water (maximum 10%). Allow the solvent to evaporate.

- **3.** If cleaning does not remove label fragments and adhesive, contact an authorized service technician.
- 4. Reconnect the data cables and AC power cord, and turn on (I) the printer.

Troubleshooting

This section provides information about errors that you might need to troubleshoot. Assorted diagnostic tests are included.

Printing Issues

Table 14 identifies possible issues with printing or print quality, the possible causes, and the recommended solutions.

Issue	Possible Cause	Recommended Solution
General print quality issues	The printer is set at an incorrect print speed.	For optimal print quality, set the print speed to the lowest possible setting for your application via control panel, the driver, or the software. You may want to perform the <i>FEED Self Test</i> on page 151 to determine the optimal settings for your printer. See <i>Print Speed</i> on page 83 for how to change the print speed.
	You are using an incorrect combination of labels and ribbon for your application.	 Switch to a different type of media or ribbon to try to find a compatible combination. If necessary, consult your authorized Zebra reseller or distributor for information and advice.
	The printer is set at an incorrect darkness level.	For optimal print quality, set the darkness to the lowest possible setting for your application. You may want to perform the <i>FEED Self Test</i> on page 151 to determine the ideal darkness setting. See <i>Print Darkness</i> on page 83 for how to change the darkness setting.
	The printhead is dirty.	Clean the printhead. See <i>Clean the Printhead</i> <i>and Platen Roller</i> on page 126.
	Incorrect or uneven printhead pressure.	 Position the printhead toggles correctly. See <i>Toggle Position Adjustment</i> on page 119. Set the printhead pressure to the minimum needed for good print quality. See <i>Printhead Pressure Adjustment</i> on page 121.
Loss of printing registration on labels.	The platen roller, pinch roller, or peel roller is dirty.	Clean the printhead and rollers. See <i>Clean the</i> <i>Printhead and Platen Roller</i> on page 126.
Excessive vertical drift in top-of-form registration.	Media guides are positioned improperly.	Ensure that the media guides are properly positioned. See <i>Load the Ribbon</i> on page 54.
	The media type is set incorrectly.	Set the printer for the correct media type (gap/notch, continuous, or mark). See <i>Media Type</i> on page 85.
	The media is loaded incorrectly.	Load media correctly. See <i>Load the Ribbon</i> on page 54.

Table 14 • Printing Issues

Issue	Possible Cause	Recommended Solution
Long tracks of missing print on	Print element damaged.	Call a service technician.
several labels	Wrinkled ribbon.	See wrinkled ribbon causes and solutions in <i>Ribbon Problems</i> on page 146.
Fine, angular gray lines on blank labels	Wrinkled ribbon.	See wrinkled ribbon causes and solutions in <i>Ribbon Problems</i> on page 146.
Printing too light or too dark over the entire label	The media or ribbon is not designed for high-speed operation.	Replace supplies with those recommended for high-speed operation.
	You are using an incorrect combination of media and ribbon for your application.	 Switch to a different type of media or ribbon to try to find a compatible combination. If necessary, consult your authorized Zebra reseller or distributor for information and advice.
	You are using ribbon with direct thermal media.	Direct thermal media does not require ribbon. To determine if you are using direct thermal media, perform the label scratch test in <i>When to Use Ribbon</i> on page 49.
	Incorrect or uneven printhead pressure.	 Position the printhead toggles correctly. See <i>Toggle Position Adjustment</i> on page 119. Set the printhead pressure to the minimum needed for good print quality. See <i>Printhead Pressure Adjustment</i> on page 121.
Smudge marks on labels	The media or ribbon is not designed for high-speed operation.	Replace supplies with those recommended for high-speed operation.
Misregistration/skips labels	The printer is not calibrated.	Calibrate the printer. See <i>Calibrate the Ribbon</i> and Media Sensors Manually on page 106.
	Improper label format.	Check your label format and correct it as necessary.
Misregistration and misprint of one to	The platen roller, pinch roller, or peel roller is dirty.	Clean the printhead and rollers. See <i>Clean the Printhead and Platen Roller</i> on page 126.
three labels	Media does not meet specifications.	Use media that meets specifications. See <i>Media Specifications</i> on page 164.
Vertical drift in top-of-form position	The printer is out of calibration.	Calibrate the printer. See <i>Calibrate the Ribbon</i> and Media Sensors Manually on page 106.
	The platen roller, pinch roller, or peel roller is dirty.	Clean the printhead and rollers. See <i>Clean the Printhead and Platen Roller</i> on page 126.

Table 14 • Printing Issues (Continued)

Issue	Possible Cause	Recommended Solution
Vertical image or label drift	The printer is using non-continuous labels but is configured in continuous mode.	Set the printer for the correct media type (gap/notch, continuous, or mark—see <i>Media</i> <i>Type</i> on page 85) and calibrate the printer, if necessary (see <i>Calibrate the Ribbon and Media</i> <i>Sensors Manually</i> on page 106).
	The media sensor is calibrated improperly.	Calibrate the printer. See <i>Calibrate the Ribbon</i> and Media Sensors Manually on page 106.
	The platen roller, pinch roller, or peel roller is dirty.	Clean the printhead and rollers. See <i>Clean the</i> <i>Printhead and Platen Roller</i> on page 126.
	Incorrect or uneven printhead pressure.	 Position the printhead toggles correctly. See <i>Toggle Position Adjustment</i> on page 119. Set the printhead pressure to the minimum needed for good print quality. See <i>Printhead Pressure Adjustment</i> on page 121.
	The media or ribbon is loaded incorrectly.	Ensure that the media and ribbon are loaded correctly. See <i>Load the Ribbon</i> on page 54.
	Incompatible media.	You must use media that meets the printer specifications. Ensure that the interlabel gaps or notches are 2 to 4 mm and consistently placed (see <i>Media Specifications</i> on page 164).
The bar code printed on a label does not scan.	The bar code is not within specifications because the print is too light or too dark.	Perform the <i>FEED Self Test</i> on page 151. Adjust the darkness or print speed settings as necessary.
	There is not enough blank space around the bar code.	Leave at least 1/8 in. (3.2 mm) between the bar code and other printed areas on the label and between the bar code and the edge of the label.
Auto Calibrate failed.	The media or ribbon is loaded incorrectly.	Ensure that the media and ribbon are loaded correctly. See <i>Load the Ribbon</i> on page 54.
	The sensors could not detect the media or ribbon.	Calibrate the printer. See <i>Calibrate the Ribbon</i> and Media Sensors Manually on page 106.
	The sensors are dirty or positioned improperly.	Ensure that the sensors are clean and properly positioned.
	The media type is set incorrectly.	Set the printer for the correct media type (gap/notch, continuous, or mark). See <i>Media Type</i> on page 85.

Table 14 • Printing Issues (Continued)

Error Messages

The control panel displays messages when there is an error. See Table 15 for LCD errors, the possible causes, and the recommended solutions.

Display/ Printer Condition	Possible Cause	Recommended Solution	
ERROR CONDITION	The printhead was replaced with one that is not a genuine Zebra [™] printhead.	Install a genuine Zebra™ printhead.	
The ERROR light flashes.	The Early Warning for Maintenance feature is enabled, and the printhead has reached the end of the specified interval for cleaning. See <i>Early Warning for</i> <i>Maintenance</i> on page 89 for more information.	 Clean the printhead. On the control panel, go to the HEAD CLEANED? menu item. Press PLUS to select YES to reset the Early Warning for Maintenance printhead cleaning counter. 	
)71L(\V///	The printhead is not fully closed.	Close printhead completely. Call a service technician.	
ERROR CONDITION HEAD OPEN	The head open sensor is not working properly.	Call a service technician.	
The printer stops; the ERROR light flashes.			
	The media is not loaded or is loaded incorrectly.	Load media correctly. See <i>Load the Ribbon</i> on page 54.	
ERROR CONDITION	Misaligned media sensor.	Check position of the media sensor.	
PAPER OUT	The printer is set for noncontinuous media, but continuous media is loaded.	Install proper media type, or reset printer for current media type and perform calibration.	
The printer stops; the MEDIA light is on; the ERROR light flashes.	continuous media is loaded.		

Table 15 • Error Messages

Display/ Printer Condition	Possible Cause	Recommended Solution
	In thermal transfer mode, ribbon is not loaded or incorrectly loaded.	Load ribbon correctly. See <i>Load the Ribbon</i> on page 54.
ERROR CONDITION RIBBON OUT	In thermal transfer mode, the ribbon sensor is not detecting ribbon.	 Load ribbon correctly. See <i>Load</i> <i>the Ribbon</i> on page 54. Calibrate the printer. See <i>Calibrate</i> <i>the Ribbon and Media Sensors</i>
The printer stops; the RIBBON light is on; the ERROR light flashes.	In thermal transfer mode, media is blocking the ribbon sensor.	 <i>Manually</i> on page 106. 1. Load media correctly. See <i>Load the Ribbon</i> on page 54. 2. Calibrate the printer. See <i>Calibrate the Ribbon and Media Sensors Manually</i> on page 106.
	In thermal transfer mode, the printer did not detect the ribbon even though it is loaded correctly.	 Print a sensor profile. See <i>Print a</i> Sensor Profile on page 91. The ribbon out threshold (1) is likely too high, above the black area that indicates where the ribbon is detected (2).
		1 - RIBBON _ 100
		2. Calibrate the printer (see <i>Calibrate the Ribbon and Media Sensors Manually</i> on page 106) or load printer defaults (see options under <i>Exit Setup Mode</i> on page 19).
	If you are using direct thermal media, the printer is waiting for ribbon to be loaded because it is incorrectly set for Thermal Transfer mode.	Set the printer for Direct Thermal mode. See <i>Print Method</i> on page 85.
WARN ING	Ribbon is loaded, but the printer is set for direct thermal mode.	Ribbon is not required with direct thermal media. If you are using direct thermal media, remove the ribbon. Thi error message will not affect printing.
RIBBON IN		If you are using thermal transfer media which requires ribbon, set the printer
The RIBBON light is on; the ERROR light flashes.		for Thermal Transfer mode. See <i>Print Method</i> on page 85.

Display/ Printer Condition	Possible Cause	Recommended Solution
THERMISTOR FAULT	The printhead has a faulty thermistor.	Call a service technician.
The ERROR light flashes.		
WARNING	Caution • An improperly connected printhead data or power cable can cause this error message. The printhead may be hot enough to cause severe burns. Allow the printhead to cool.	
HEAD COLD	The printhead temperature is approaching its lower operating	Continue printing while the printhead reaches the correct operating
The printer prints while the ERROR light flashes.	limit.	temperature. If the error remains, the environment may be too cold for proper printing. Relocate the printer to a warmer area.
	The printhead data cable is not properly connected.	Caution • Turn off (O) the printer before performing this procedure. Failure to do so can damage the printhead.
		 Turn off (O) the printer.
		2. Disconnect and reconnect the data cable to the printhead.
		3. Ensure that the cable connector is fully inserted into the printhead connector.
		4. Turn on (I) the printer.
	The printhead has a faulty thermistor.	Call a service technician.
)71U(\////	Caution • The printhead m burns. Allow the printhead	hay be hot enough to cause severe to cool.
WARNING HEAD TOO HOT	The printhead is over temperature.	Allow the printer to cool. Printing automatically resumes when the
The printer stops; the ERROR light flashes.		printhead elements cool to an acceptable operating temperature.

Display/ Printer Condition	Possible Cause	Recommended Solution
WARN ING	Caution • An improperly connected printhead data or power cable can cause these error messages. The printhead may be hot enough to cause severe burns. Allow the printhead to cool.	
HEAD COLD	The printhead data cable is not properly connected.	Caution • Turn off (O) the printer before performing this procedure. Failure to do so can damage the printhead.
)71U(V/// 1		1. Turn off (O) the printer.
THERMISTOR		 Disconnect and reconnect the data cable to the printhead.
FAULT]	3. Ensure that the cable connector is fully inserted into the printhead connector.
)71L(\/ <i>//</i>		4. Turn on (I) the printer.
ERROR CONDITION	The printhead has a faulty	Call a service technician.
HEAD ELEMENT BAD	thermistor.	
The printer stops; the ERROR light is on; the printer cycles through these three messages.		
DEFRAGMENTING	The printer is defragmenting memory.	Caution • Do NOT turn off the printer power during defragmenting. Doing so can damage the printer.
DO NOT POWER OFF		Allow the printer to finish
The printer stops.		defragmenting. If you get this error message frequently, check your label formats. Formats that write to and erase memory frequently may cause the printer to defragment often. Using properly coded label formats usually minimizes the need for defragmenting. If this error message does not go away contact Technical Support. The printer requires service.

Display/ Printer Condition	Possible Cause	Recommended Solution
OUT OF MEMORY CREATING BITMAP	There is not enough memory to perform the function specified on the second line of the error message.	Free up some of the printer's memory by adjusting the label format or printer parameters. One way to free up memory is to adjust the print width to the actual width of the label instead of leaving the print width set to the default. See <i>Print Width</i> on page 85.
OUT OF MEMORY		Ensure that the device, such as a FLASH memory card, is installed and not write protected or full.
BUILDING FORMAT		Ensure that the data is not directed to a device that is not installed or is unavailable.
OUT OF MEMORY STORING GRAPHIC		Call a service technician.
OUT OF MEMORY STORING FORMAT		
OUT OF MEMORY STORING BITMAP		
OUT OF MEMORY STORING FONT		

Calibration Problems

Table 16 identifies problems with calibration, the possible causes, and the recommended solutions.

Problem	Possible Cause	Recommended Solution
Loss of printing registration on labels. Excessive vertical drift in top-of-form registration.	The platen roller is dirty.	Clean the platen roller according to the instructions in <i>Clean the Printhead and Platen Roller</i> on page 126.
	Media guides are positioned improperly.	Ensure that the media guides are properly positioned.
	The media type is set incorrectly.	Set the printer for the correct media type (non-continuous or continuous) See <i>Media Type</i> on page 85.
	The media is loaded incorrectly or the media sensor is positioned improperly.	Reload the media and ensure that the sensor in use is properly positioned. See <i>Adjust Transmissive Media Sensors</i> on page 115.
Auto Calibrate failed.	Media or ribbon is loaded incorrectly.	Ensure that media and ribbon are loaded correctly.
	The sensors could not detect the media or ribbon.	Calibrate the printer. See <i>Calibrate the Ribbon</i> and Media Sensors Manually on page 106.
	The sensors are dirty or positioned improperly.	Ensure that the sensors are clean and properly positioned.
	The media type is set incorrectly.	Set the printer for the correct media type (non-continuous or continuous) See <i>Media Type</i> on page 85.

Table 16 • Calibration Problems

Communications Problems

Table 17 identifies problems with communications, the possible causes, and the recommended solutions.

Problem	Possible Cause	Recommended Solution	
A label format was sent to the printer but was not	The communication parameters are incorrect.	Check the printer driver or software communications settings (if applicable).	
recognized. The DATA light does not flash.		If you are using serial communication, check the serial port settings. See <i>Port Settings</i> on page 103.	
		If you are using serial communication, make sure that you are using a null modem cable or a null modem adapter.	
		Check the printer's handshake protocol setting. The setting used must match the one being used by the host computer. See <i>Set the Host</i> <i>Handshake Protocol Value</i> on page 105.	
		If a driver is used, check the driver communication settings for your connection.	
A label format was sent to	The serial communication	Ensure that the flow control settings match.	
the printer. Several labels print, then the printer skips, misplaces, misses, or distorts the image on the label.	settings are incorrect.	Check the communication cable length. See Table 4 on page 41 for requirements.	
		Check the printer driver or software communications settings (if applicable).	
A label format was sent to the printer but was not recognized. The DATA light flashes but no printing occurs.	The prefix and delimiter characters set in the printer do not match the ones in the label format.	Verify the prefix and delimiter characters. See Set the Control Prefix Character Value on page 100 and Set the Delimiter Character Value on page 101.	
	Incorrect data is being sent to the printer.	Check the communication settings on the computer. Ensure that they match the printer settings.	
		If the problem continues, check the label format.	

Table 17 • Communications Problems

Ribbon Problems

Table 18 identifies problems that may occur with ribbon, the possible causes, and the recommended solutions.

Problem	Possible Cause	Recommended Solution	
Broken or melted ribbon	Darkness setting too high.	 Reduce the darkness setting. See <i>Print</i> <i>Darkness</i> on page 83 for how to change the darkness setting. Clean the printhead thoroughly. See <i>Clean</i> <i>the Printhead and Platen Roller</i> on page 126. 	
	The ribbon is coated on the wrong side and cannot be used in this printer.	Replace the ribbon with one coated on the correct side. For more information, see <i>Coated Side of Ribbon</i> on page 49.	
Wrinkled ribbon	Ribbon was loaded incorrectly.	Load the ribbon correctly. See <i>Load the Ribbon</i> on page 54.	
	Incorrect burn temperature.	For optimal print quality, set the darkness to the lowest possible setting for your application. You may want to perform the <i>FEED Self Test</i> on page 151 to determine the ideal darkness setting.	
		See <i>Print Darkness</i> on page 83 for how to change the darkness setting.	
	Incorrect or uneven printhead pressure.	Set the printhead pressure to the minimum needed for good print quality. See <i>Printhead</i> <i>Pressure Adjustment</i> on page 121.	
	Media not feeding properly; "walking" from side to side.	Make sure that media is snug by adjusting the media guide, or call a service technician.	
	The printhead or platen roller may be installed incorrectly.	Call a service technician.	
The printer does not detect when the ribbon runs out.	The printer may have been calibrated without ribbon. Later, ribbon was inserted	Calibrate the printer, this time using ribbon, or load printer defaults. See <i>Calibrate the Ribbon and Media Sensors Manually</i> on page 106 or	
In thermal transfer mode, the printer did not detect the ribbon even though it is loaded correctly.	without the user recalibrating the printer or loading printer defaults.	Load Defaults on page 93.	
The printer indicates that ribbon is out, even though ribbon is loaded correctly.The printer was not calibrated for the label and ribbon being used.		Calibrate the printer. See <i>Calibrate the Ribbon</i> and Media Sensors Manually on page 106.	

Table 18 • Ribbon Problems

Miscellaneous Issues

Table 19 identifies miscellaneous issues with the printer, the possible causes, and the recommended solutions.

Problem	Possible Cause	Recommended Solution	
The control panel display shows a language that I cannot read	The language parameter was changed through the control panel or a firmware command.	 On the control panel display, press SETUP. Press the LEFT ARROW once to move to the LANGUAGE parameter. Use PLUS (+) or MINUS (-) to scroll through the language selections. The selections for this parameter are displayed in the actual languages to make it easier for you to find one that you are able to read. 	
		4. Select the language that you want to display.	
The display is missing characters or parts of characters	The display may need replacing.	Call a service technician.	
Changes in parameter settings	Some parameters are set incorrectly.	1. Check the parameters and change or reset if necessary.	
did not take effect		2. Turn the printer off (O) and then on (I).	
	A firmware command (such as device.command_override) turned off the ability to change the parameter.	Refer to the <i>Programming Guide for ZPL, ZBI, Set-Get-Do, Mirror, and WML</i> or call a service technician.	
	A firmware command changed the parameter back to the previous setting.		
	If the problem persists, there may be a problem with the main logic board.	Call a service technician.	
Non-continuous labels are being	The printer was not calibrated for the media being used.	Calibrate the printer. See <i>Calibrate the Ribbon</i> and Media Sensors Manually on page 106.	
treated as continuous labels.	The printer is configured for continuous media.	Set the printer for the correct media type (gap/notch, continuous, or mark). See <i>Media Type</i> on page 85.	
All indicator lights are on, nothing is on the display (if the printer has a display), and the printer locks up.	Internal electronic or firmware failure.	Call a service technician.	
The printer locks up while running the Power-On Self Test.	Main logic board failure.	Call a service technician.	

Table 19 • Miscellaneous Printer Problems

Printer Diagnostics

Self tests and other diagnostics provide specific information about the condition of the printer. The self tests produce sample printouts and provide specific information that helps determine the operating conditions for the printer.

Important • Use full-width media when performing self tests. If your media is not wide enough, the test labels may print on the platen roller. To prevent this from happening, check the print width, and ensure that the width is correct for the media that you are using.

Each self test is enabled by pressing a specific control panel key or combination of keys while turning on (I) the printer power. Keep the key(s) pressed until the first indicator light turns off. The selected self test automatically starts at the end of the Power-On Self Test.

Note •

- When performing these self tests, do not send data to the printer from the host.
- If your media is shorter than the label to be printed, the test label continues on the next label.
- When canceling a self test prior to its actual completion, always reset the printer by turning it off (**O**) and then on (**I**).

Power-On Self Test

A Power-On Self Test (POST) is performed each time the printer is turned on (I). During this test, the control panel lights (LEDs) turn on and off to ensure proper operation. At the end of this self test, only the STATUS LED remains lit. When the Power-On Self Test is complete, the media is advanced to the proper position.

To initiate the Power-On Self Test, complete these steps:

1. Turn on (**I**) the printer.

The POWER LED illuminates. The other control panel LEDs and the LCD monitor the progress and indicate the results of the individual tests. All messages during the POST display in English; however, if the test fails, the resulting messages cycle through the international languages as well.

CANCEL Self Test

The CANCEL self test prints a printer configuration label and a network configuration label. For other ways to print these labels, see *Print Information* on page 91.

To perform the CANCEL Self Test, complete these steps:

- **1.** Turn off (**O**) the printer.
- **2.** Press and hold **CANCEL** while turning on (I) the printer. Hold **CANCEL** until the first control panel light turns off.

The printer prints a printer configuration label (Figure 13) and then a network configuration label (Figure 14).

PAUSE Self Test

This self test can be used to provide the test labels required when making adjustments to the printer's mechanical assemblies or to determine if any printhead elements are not working. Figure 15 shows a sample printout.

To perform a PAUSE self test, complete these steps:

- **1.** Turn off (**O**) the printer.
- **2.** Press and hold **PAUSE** while turning on (**I**) the printer. Hold **PAUSE** until the first control panel light turns off.
 - The initial self test prints 15 labels at the printer's slowest speed, and then automatically pauses the printer. Each time **PAUSE** is pressed, an additional 15 labels print. Figure 15 shows a sample of the labels.

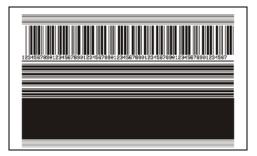

Figure 15 • PAUSE Test Label

- While the printer is paused, pressing **CANCEL** alters the self test. Each time **PAUSE** is pressed, 15 labels print at 6 in. (152 mm) per second.
- While the printer is paused, pressing **CANCEL** again alters the self test a second time. Each time **PAUSE** is pressed, 50 labels print at the printer's slowest speed
- While the printer is paused, pressing **CANCEL** again alters the self test a third time. Each time **PAUSE** is pressed, 50 labels print at 6 in. (152 mm) per second.
- While the printer is paused, pressing **CANCEL** again alters the self test a fourth time. Each time **PAUSE** is pressed, 15 labels print at the printer's maximum speed.
- 3. To exit this self test at any time, press and hold CANCEL.

FEED Self Test

Different types of media may require different darkness settings. This section contains a simple but effective method for determining the ideal darkness for printing bar codes that are within specifications.

During the FEED self test, labels are printed at different darkness settings at two different print speeds. The relative darkness and the print speed are printed on each label. The bar codes on these labels may be ANSI-graded to check print quality.

During this test, one set of labels is printed at 2 ips, and another set is printed at 6 ips. The darkness value starts at three settings lower than the printer's current darkness value (relative darkness of -3) and increase until the darkness is three settings higher than the current darkness value (relative darkness of +3).

To perform a FEED self test, complete these steps:

- 1. Print a configuration label to show the printer's current settings.
- **2.** Turn off (**O**) the printer.
- **3.** Press and hold **FEED** while turning on (**I**) the printer. Hold **FEED** until the first control panel light turns off.

The printer prints a series of labels (Figure 16) at various speeds and at darkness settings higher and lower than the darkness value shown on the configuration label.

Figure 16 • FEED Test Label

4. See Figure 17 and Table 20. Inspect the test labels and determine which one has the best print quality for your application. If you have a bar code verifier, use it to measure bars/spaces and calculate the print contrast. If you do not have a bar code verifier, use your eyes or the system scanner to choose the optimal darkness setting based on the labels printed in this self test.

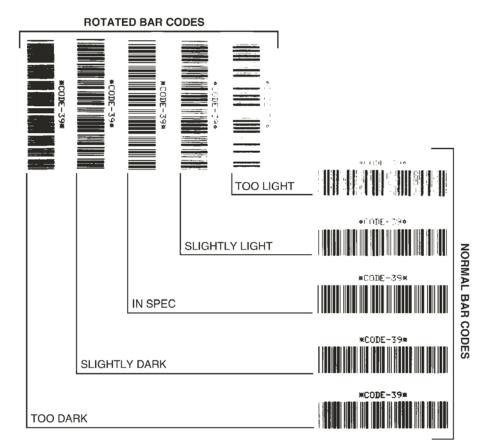

Figure 17 • Bar Code Darkness Comparison

 Table 20 • Judging Bar Code Quality

Print Quality	Description	
Too dark	Labels that are too dark are fairly obvious. They may be readable but not "in-spec."	
	 The normal bar code bars increase in size. The openings in small alphanumeric characters may fill in with ink. Rotated bar code bars and spaces run together. 	
Slightly dark	 Slightly dark labels are not as obvious. The normal bar code will be "in-spec." Small character alpha numerics will be bold and could be slightly filled in. The rotated bar code spaces are small when compared to the "in-spec" code, possibly making the code unreadable. 	

Print Quality	Description	
"In-spec"	The "in-spec" bar code can only be confirmed by a verifier, but it should exhibit some visible characteristics.The normal bar code will have complete, even bars and	
	 clear, distinct spaces. The rotated bar code will have complete, even bars and clear, distinct spaces. Although it may not look as good as a slightly dark bar code, the bar code will be "in-spec." In both normal and rotated styles, small alphanumeric characters look complete. 	
Slightly light	Slightly light labels are, in some cases, preferred to slightly dark ones for "in-spec" bar codes.	
	• Both normal and rotated bar codes will be in spec, but small alphanumeric characters may not be complete.	
Too light	Labels that are too light are obvious.	
	• Both normal and rotated bar codes have incomplete bars and spaces.	
	• Small alphanumeric characters are unreadable.	

Table 20 • Judging Bar Code Quality (Continued)

- 5. Note the relative darkness value and the print speed printed on the best test label.
- **6.** Add or subtract the relative darkness value from the darkness value specified on the configuration label. The resulting numeric value is the best darkness value for that specific label/ribbon combination and print speed.
- 7. If necessary, change the darkness value to the darkness value on the best test label.
- 8. If necessary, change the print speed to the same speed as on the best test label.

FEED + PAUSE Self Test

Performing this self test temporarily resets the printer configuration to the factory default values. These values are active only until power is turned off unless you save them permanently in memory. If the factory default values are permanently saved, a sensor calibration procedure must be performed. (See *Calibrate the Ribbon and Media Sensors Manually* on page 106.)

To perform a FEED and PAUSE self test, complete these steps:

- **1.** Turn off (**O**) the printer.
- 2. Press and hold **FEED** + **PAUSE** while turning on (I) the printer.
- **3.** Hold **FEED** + **PAUSE** until the first control panel light turns off.

The printer configuration is reset to the factory default values. No labels print at the end of this test.

CANCEL + PAUSE Self Test

Performing this self test temporarily resets the network configuration to the factory default values. These values are active only until power is turned off unless you save them permanently in memory.

To perform a CANCEL and PAUSE self test, complete these steps:

- **1.** Turn off (**O**) the printer.
- 2. Press and hold CANCEL + PAUSE while turning on (I) the printer.
- 3. Hold CANCEL + PAUSE until the first control panel light turns off.

The printer's network configuration is reset to the factory default values. No labels print at the end of this test.

Communication Diagnostics Test

The communication diagnostics test is a troubleshooting tool for checking the interconnection between the printer and the host computer. When the printer is in diagnostics mode, it prints all data received from the host computer as straight ASCII characters with the hex values below the ASCII text. The printer prints all characters received, including control codes such as CR (carriage return). Figure 18 shows a typical test label from this test.

Note • The test label prints upside-down.

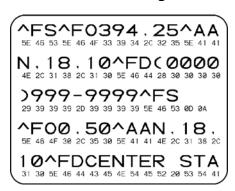

Figure 18 • Communication Diagnostics Test Label

To use communication diagnostics mode, complete these steps:

- 1. Set the print width equal to or less than the label width being used for the test. See *Print Width* on page 85 for more information.
- 2. Set the DIAGNOSTICS MODE option to ENABLED. For methods, see *Communication Diagnostics Mode* on page 94.

The printer enters diagnostics mode and prints any data received from the host computer on a test label

3. Check the test label for error codes. For any errors, check that your communication parameters are correct.

Errors show on the test label as follows:

- FE indicates a framing error.
- OE indicates an overrun error.
- PE indicates a parity error.
- NE indicates noise.
- **4.** Turn the printer off (**O**) and then back on (**I**) to exit this self test and return to normal operation.

Sensor Profile

Use the sensor profile image (which will extend across several actual labels or tags) to troubleshoot the following situations:

- The printer experiences difficulty in determining gaps (web) between labels.
- The printer incorrectly identifies preprinted areas on a label as gaps (web).
- The printer cannot detect ribbon.

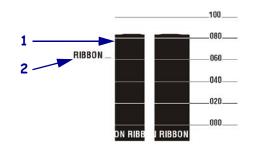

With the printer in the Ready state, print a sensor profile in one of these ways:

Using the buttons on	a. Turn off (O) the printer.	
the control panel	b. Press and hold FEED + CANCEL while turning on (I) the	
	printer.	
	c. Hold FEED + CANCEL until the first control panel light turns off.	
Using ZPL	a. Send the ~JG command to the printer. See the Zebra	
	<i>Programming Guide</i> for more information about this command.	
	command.	
Using the control panel	. On the control panel display, navigate to the following	
menu items	item. See Control Panel Display on page 17 for	
	information about using the control panel and accessing the menus.	
	SENSOR PROFILE	
	PRINT+	
	b. Press PLUS (+) to select PRINT.	

Compare your results to the examples shown in this section. If the sensitivity of the sensors must be adjusted, calibrate the printer (see *Calibrate the Ribbon and Media Sensors Manually* on page 106).

Ribbon Sensor Profile (Figure 19) The bars (1) on the sensor profile indicate the ribbon sensor readings. The ribbon sensor threshold setting is indicated by the word RIBBON (2). If the ribbon readings are below the threshold value, the printer does not acknowledge that ribbon is loaded.

Figure 19 • Sensor Profile (Ribbon Section)

Media Sensor Profile (Figure 20) The media sensor readings are shown as bars and flat areas on the sensor profile (Figure 20). The bars (1) indicate gaps between labels (the web), and the low areas (2) indicate where labels are located. If you compare the sensor profile printout to a blank length of your media, the bars should be the same distance apart as the gaps on the media. If the distances are not the same, the printer may be having difficulty determining where the gaps are located.

The media sensor threshold settings are shown by the words MEDIA (3) for the media threshold and WEB (4) for the web threshold. Use the numbers to the left of the sensor readings to compare the numeric readings to the sensor settings.

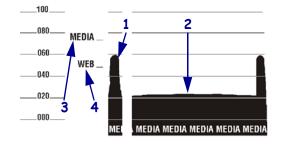

Figure 20 • Sensor Profile (Media Section)

Zebra Programming Language (ZPL) 16	;1
Bar Codes	;1
General Specifications	
Physical Specifications	
Electrical Specifications	
Environmental Conditions for Operation and Storage	2
Print Specifications	3
Media Specifications	4
Ribbon Specifications	5

Features

This section lists the standard and optional features for the printer.

Standard Features

Note • Printer specifications are subject to change without notice.

- Thermal transfer and direct thermal printing
- 16 MB SDRAM (12 MB user-available)
- ZebraNet 10/100 Print Server (internal)
- USB 2.0 Port
- RS-232 serial port
- Bidirectional parallel port
- 10/100 internal Ethernet
- Real-Time Clock
- Advanced Counter
- XML-enabled printing

Optional Features

- ZebraNet Wireless Print Server
- Full-width rotary knife cutter and catch tray
- Media rewind spindle
- Factory-installed 64 MB (61 MB user available) Flash memory option
- Additional fonts

Zebra Programming Language (ZPL)

ZPL II features include:

- Downloadable graphics, scalable and bitmap fonts, and label formats
- Object copying between memory areas
- (RAM, memory card, and internal Flash)
- Code page 850 character set
- Data compression
- Automatic virtual input buffer management
- Format inversion
- Mirror image printing
- Four-position field rotation (0°, 90°, 180°, 270°)

Bar Codes

Types of bar codes include:

- Bar code ratios—2:1, 7:3, 5:2, 3:1
- Codabar (supports ratios of 2:1 up to 3:1)
- CODABLOCK
- Code 11
- Code 39 (supports ratios of 2:1 up to 3:1)
- Code 49 (two-dimensional bar code)
- Code 93
- Code 128 (with subsets A, B, and C and UCC case codes)
- Check digit calculation where applicable
- Data Matrix
- EAN-8, EAN-13, EAN extensions
- ISBT-128
- Industrial 2 of 5
- Interleaved 2 of 5 (supports ratios of 2:1 up to 3:1, Modulus 10 Check Digit)

- Controlled via mainframe, mini-computer, PC, portable data terminal
- Programmable quantity with print, pause, and cut control
- Communicates in printable ASCII characters
- Error-checking protocol
- Status message to host upon request
- Serialized fields
- In-spec OCR-A and OCR-B
- UPC/EAN
- User-programmable password

- LOGMARS
- MaxiCode
- Micro PDF
- MSI
- PDF-417 (2-dimensional bar code)
- PLANET code
- Plessey
- POSTNET
- OR-Code
- RSS code
- Standard 2 of 5
- TLC 39
- UPC-A, UPC-E, UPC extensions

Print Specifications

Print Specifications	203 dpi	300 dpi	
Printhead resolution	203 dots/inch (8 dots/mm)	300 dots/inch (12 dots/mm)	
Dot size (width×length)	0.0049×0.0049 in. (0.125×0.125 mm)	0.0033×0.0039 in. (0.084×0.099 mm)	
First dot location (measured from inside media edge)	0.10 ± 0.035 in. (2.5 ± 0.9 mm)	0.023 ± 0.035 in. (0.6 ± 0.9 mm)	
Maximum print width	4.09 in. (104 mm)	4.09 in. (104 mm)	
Maximum print length (non-continuous)	39 in. (991 mm)	39 in. (991 mm)	
Maximum print length (continuous)	150 in. (3810 mm)	100 in. (3810 mm)	
Selectable print speeds (inches per second)	2.4, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 2.4, 3, 4, 5, 6, 7, 8, 9		
Bar code modulus (X) dimension:			
Ladder (rotated) orientation	4.9 mil to 49 mil	3.9 mil to 39 mil	
Picket fence (nonrotated) orientation	4.9 mil to 49 mil	3.33 mil to 33 mil	
Thin film printhead with Element Energy Equalizer $(E^3)^{ entriese}$	Yes	Yes	

Refer to the tables that follow for printer specifications.

Media Specifications

Use the correct size and type of labels for best performance. Refer to the tables that follow for specifications.

Important • Media registration and minimum label length are affected by label type and width, ribbon type, print speed, and printer mode of operation. Performance improves as these factors are optimized. Zebra recommends qualifying any application with thorough testing.

Media Specifications		203 dpi	300 dpi	
Minimum label length	Tear-Off	0.7 in. (18 mm)	0.7 in. (18 mm)	
	Peel-Off	0.5 in. (13 mm)	0.5 in. (13 mm)	
	Cutter	1.5 in. (38 mm)	1.5 in. (38 mm)	
	Rewind	0.25 in. (6 mm)	0.25 in. (6 mm)	
Total media width	Minimum	0.79 in. (20 mm)	0.79 in. (20 mm)	
(label + backing, if any)	Maximum	4.5 in. (114 mm)	4.5 in. (114 mm)	
Total thickness		0.003 in. (0.076 mm)	0.003 in. (0.076 mm)	
(includes backing, if any)		0.012 in. (0.305 mm)	0.012 in. (0.305 mm)	
Cutter maximum full-width m	edia thickness	0.009 in. (0.23 mm)	0.009 in. (0.23 mm)	
Roll media core inside diamet	er	3 in. (76 mm)	3 in. (76 mm)	
Maximum roll diameter on 3 i	n. (76 mm) core	8.0 in. (203 mm)	8.0 in. (203 mm)	
Interlabel gap	Minimum	0.079 in. (2 mm)	0.079 in. (2 mm)	
	Preferred	0.118 in. (3 mm)	0.118 in. (3 mm)	
	Maximum	No more than the calibrated length of the label.	No more than the calibrated length of the label.	
Maximum internal fanfold me (label + backing): $L \times W \times H$	edia pack size	8.0×4.5×4.5 in. (203×114×114 mm)	8.0×4.5×4.5 in. (203×114×114 mm)	
Ticket/tag sensing notch: L \times	W	0.12×0.25 in. (3×6 mm)	0.12×0.25 in. (3×6 mm)	
Ticket/tag sensing hole diameter		0.125 in. (3 mm)	0.125 in. (3 mm)	
Label registration tolerance (vertical)		\pm 0.06 in. (± 1.5 mm)	±0.06 in. (± 1.5 mm)	
Label registration tolerance (horizontal)		\pm 0.06 in. (± 1.5 mm)	\pm 0.06 in. (± 1.5 mm)	
Maximum media density		0.5 ODU	0.5 ODU	

Black Mark Sensing

Media Specifications		203 dpi	300 dpi
Mark length (measuring parallel	Minimum	0.12 in. (3 mm)	0.12 in. (3 mm)
to label/tag edge)	Maximum	0.43 in. (11 mm)	0.43 in. (11 mm)
Mark width (measuring to	Minimum	0.43 in. (11 mm)	0.43 in. (11 mm)
perpendicular label/tag edge)	Maximum	Full media width	Full media width
Mark location		within 0.040 in. (1 mm) of the inside media edge	within 0.040 in. (1 mm) of the inside media edge
Mark density in Optical Density Unit (ODU)		>1.0	>1.0

Ribbon Specifications

Refer to the following tables for ribbon specifications.

- **Note** Consider the following when using ribbon:
- Match the ribbon to the label width and printhead width that you are using. The ribbon should be at least as wide as the labels to protect the printhead from excessive wear.
- Ribbon must be wound with the coated side out.

Ribbon Specifications	203 dpi	300 dpi
Printhead resolution	203 dots/inch (8 dots/mm)	300 dots/inch (12 dots/mm)
Ribbon width Minimum	0.79 in. (20 mm)	0.79 in. (20 mm)
Ribbon width Maximum	4.33 in. (110 mm)	4.33 in. (110 mm)
Maximum ribbon length	1476 ft (450 m)	1476 ft (450 m)
Ribbon core inside diameter	1.0 in. (25.4 mm)	1.0 in. (25.4 mm)
Maximum ribbon roll outside diameter	3.2 in. (81.3 mm)	3.2 in. (81.3 mm)

Notes •		

Glossary

alphanumeric Indicating letters, numerals, and characters such as punctuation marks.

backfeed When the printer pulls the media and ribbon (if used) backward into the printer so that the beginning of the label to be printed is properly positioned behind the printhead. Backfeed occurs when operating the printer in Tear-Off and Applicator modes.

bar code A code by which alphanumeric characters can be represented by a series of adjacent stripes of different widths. Many different code schemes exist, such as the universal product code (UPC) or Code 39.

black mark A registration mark found on the underside of the print media that acts as a startof-label indication for the printer. (See *non-continuous media*.)

calibration (of a printer) A process in which the printer determines some basic information needed to print accurately with a particular media and ribbon combination. To do this, the printer feeds some media and ribbon (if used) through the printer and senses whether to use the direct thermal or thermal transfer print method, and (if using non-continuous media) the length of individual labels or tags.

configuration The printer configuration is a group of operating parameters specific to the printer application. Some parameters are user selectable, while others are dependent on the installed options and mode of operation. Parameters may be switch selectable, control panel programmable, or downloaded as ZPL II commands. A configuration label listing all the current printer parameters may be printed for reference.

continuous media Label or tag-stock media that has no notch, gap, or web (media liner only) to separate the labels or tags. The media is one long piece of material.

core diameter The inside diameter of the cardboard core at the center of a roll of media or ribbon.

diagnostics Information about which printer functions are not working that is used for troubleshooting printer problems.

die-cut media A type of label stock that has individual labels stuck to a media liner. The labels may be either lined up against each other or separated by a small distance. Typically the material surrounding the labels has been removed. (See *non-continuous media*.)

direct thermal A printing method in which the printhead presses directly against the media. Heating the printhead elements causes a discoloration of the heat-sensitive coating on the media. By selectively heating the printhead elements as the media moves past, an image is printed onto the media. No ribbon is used with this printing method. Contrast this with *thermal transfer*.

direct thermal media Media that is coated with a substance that reacts to the application of direct heat from the printhead to produce an image.

dynamic RAM The memory devices used to store the label formats in electronic form while they are being printed. The amount of DRAM memory available in the printer determines the maximum size and number of label formats that can be printed. This is volatile memory that loses the stored information when power is turned off.

fanfold media Media that comes folded in a rectangular stack. Contrast this with *roll media*.

firmware This is the term used to specify the printer's operating program. This program is downloaded to the printer from a host computer and stored in FLASH memory. Each time the printer power is turned on, this operating program starts. This program controls when to feed the media forward or backward and when to print a dot on the label stock.

FLASH memory FLASH memory is non-volatile and maintains the stored information intact when power is off. This memory area is used to store the printer's operating program. In addition, this memory can be used to store optional printer fonts, graphic formats, and complete label formats.

Font A complete set of alphanumeric characters in one style of type. Examples include CG TimesTM, CG Triumvirate Bold CondensedTM.

ips (inches-per-second) The speed at which the label or tag is printed. Zebra printers can print from 1 ips to 12 ips.

label An adhesive-backed piece of paper, plastic, or other material on which information is printed.

label backing (liner) The material on which labels are affixed during manufacture and which is discarded or recycled by the end-users.

light emitting diode (LED) Indicators of specific printer status conditions. Each LED is either off, on, or blinking depending on the feature being monitored.

liquid crystal display (LCD) The LCD is a back-lit display that provides the user with either operating status during normal operation or option menus when configuring the printer to a specific application.

lock-up This is the term generally used to describe a fault condition that, for no apparent reason, causes the printer to stop working. THIS COMMAND IS NOT FOUND IN ZPL GUIDE.

media Material onto which data is printed by the printer. Types of media include: tag stock, die-cut labels, continuous labels (with and without media liner), non-continuous media, fanfold media, and roll media.

media sensor This sensor is located behind the printhead to detect the presence of media and, for non-continuous media, the position of the web, hole, or notch used to indicate the start of each label.

media supply hanger The stationary arm that supports the media roll.

non-continuous media Media that contains an indication of where one label/printed format ends and the next one begins. Examples are die-cut labels, notched tag-stock, and stock with black mark registration marks.

non-volatile memory Electronic memory that retains data even when the power to the printer is turned off.

notched media A type of tag stock containing a cutout area that can be sensed as a start-oflabel indicator by the printer. This is typically a heavier, cardboard-like material that is either cut or torn away from the next tag. (See *non-continuous media*.)

peel-off A mode of operation in which the printer peels a printed label away from the backing and allows the user to remove it before another label is printed. Printing pauses until the label is removed.

print speed The speed at which printing occurs. For thermal transfer printers, this speed is expressed in terms of ips (inches per second).

printhead wear The degradation of the surface of the printhead and/or the print elements over time. Heat and abrasion can cause printhead wear. Therefore, to maximize the life of the printhead, use the lowest print darkness setting (sometimes called burn temperature or head temperature) and the lowest printhead pressure necessary to produce good print quality. In the thermal transfer printing method, use ribbon that is as wide or wider than the media to protect the printhead from the rough media surface. THIS COMMAND IS NOT FOUND IN ZPL GUIDE.

registration Alignment of printing with respect to the top (vertical) or sides (horizontal) of a label or tag.

ribbon A band of material consisting of a base film coated with wax or resin "ink." The inked side of the material is pressed by the printhead against the media. The ribbon transfers ink onto the media when heated by the small elements within the printhead. Zebra ribbons have a coating on the back that protects the printhead from wear.

ribbon wrinkle A wrinkling of the ribbon caused by improper alignment or improper printhead pressure. This wrinkle can cause voids in the print and/or the used ribbon to rewind unevenly. This condition should be corrected by performing adjustment procedures.

roll media Media that comes supplied rolled onto a core (usually cardboard). Contrast this with *fanfold media*.

supplies A general term for media and ribbon.

symbology The term generally used when referring to a bar code.

tag A type of media having no adhesive backing but featuring a hole or notch by which the tag can be hung on something. Tags are usually made of cardboard or other durable material.

tear-off A mode of operation in which the user tears the label or tag stock away from the remaining media by hand.

thermal transfer A printing method in which the printhead presses an ink or resin coated ribbon against the media. Heating the printhead elements causes the ink or resin to transfer onto the media. By selectively heating the printhead elements as the media and ribbon move past, an image is printed onto the media. Contrast this with *direct thermal*.

void A space on which printing should have occurred, but did not due to an error condition such as wrinkled ribbon or faulty print elements. A void can cause a printed bar code symbol to be read incorrectly or not at all.
